

IKEUCHI Spray nozzles for the Iron & Steel Industry

17S

“The Fog Engineers”

H.IKEUCHI & CO., LTD.

High quality spray nozzles supporting the

Steel is an essential product in our lives.

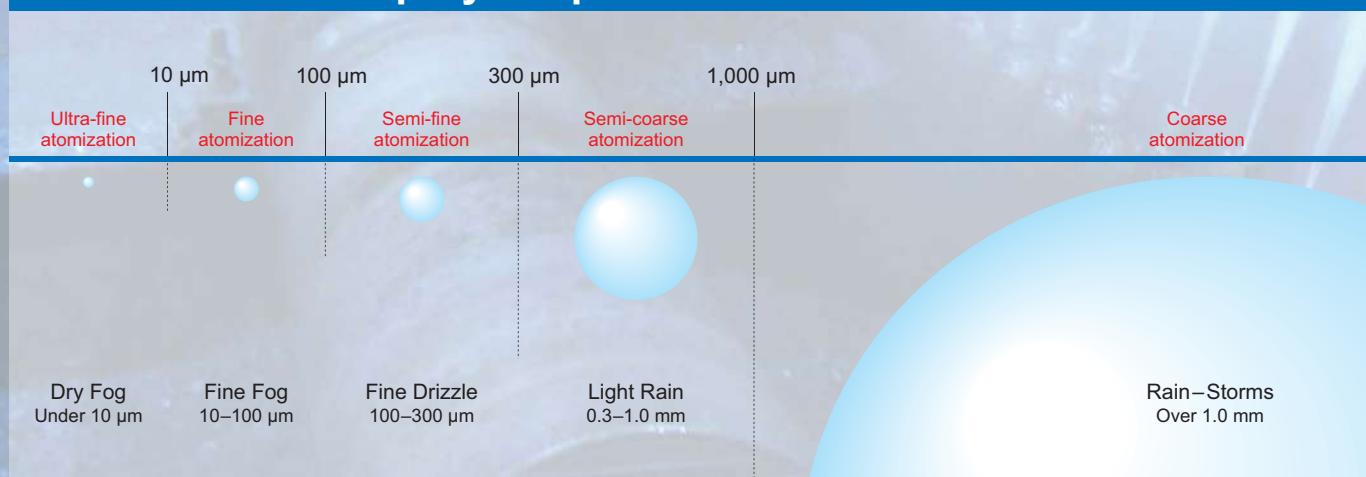

Leading-edge technologies and know-how are required to produce the highest-quality, highest-performance steel products.

IKEUCHI helps steelmakers manufacture uniformly high quality products, create effective and cost-saving production lines, as well as ensure reliable, stable operation.

IKEUCHI has developed spray nozzles and systems for steel cooling, energy-saving descaling, and many other applications.

We will continue our efforts and development to meet all of our customers' needs.

Classification of Spray Droplet Size

There are many opinions on the classification of spray droplet sizes but IKEUCHI, "The Fog Engineers", have classified them as above and propose optimized fog for specific requirements and work-environment conditions.

steelmaking industry worldwide

Specifications of the products and contents of this catalog are subject to change without prior notice for purpose of product improvement.

IKEUCHI Cooling Technology

IKEUCHI provides high-quality spray nozzles and control systems, CFD simulation analysis, and cooling trial experiments combined with an outstanding performance record for the steel industry.

Cooling effects and conditions

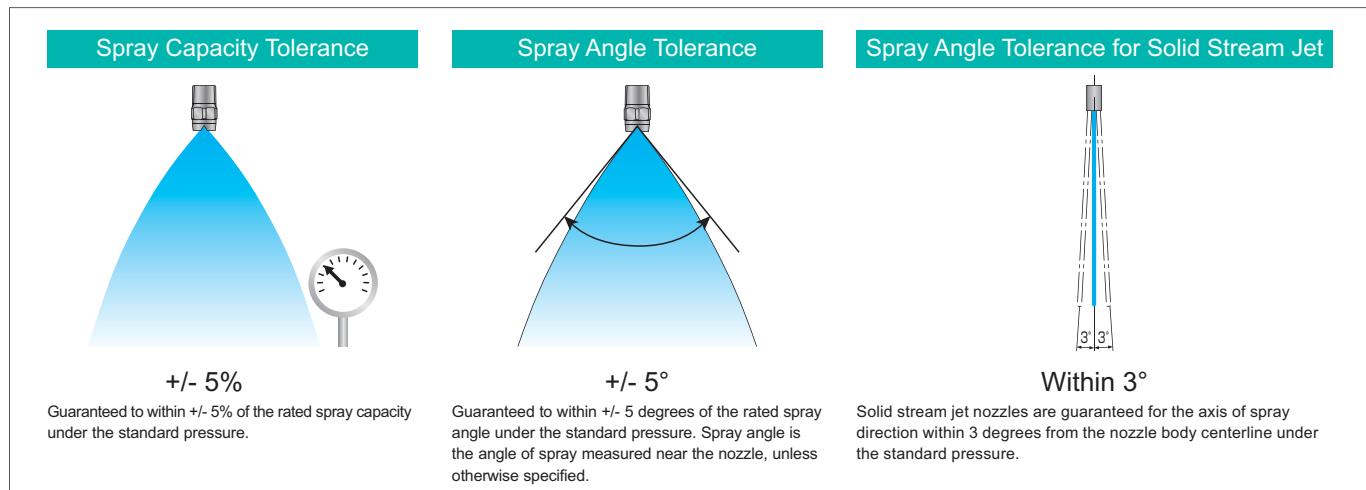

- The effect of spray cooling is dependent on *the fog, the cooling target, the environment and the cooling medium*.
- IKEUCHI measures each aspect of fog spraying performance and uses CFD simulation to create plans for the optimum cooling conditions.

Guarantee of precision nozzle performance

To produce the best cooling effects, all spray nozzles must provide uniform spray performance as designed.

All IKEUCHI's precision-made hydraulic spray nozzles are guaranteed for spray angles and spray capacities. This guarantee covers metal, plastic, and ceramic nozzles.

A standard pressure is defined as the design pressure based on the common liquid pressure during normal use for each hydraulic spray nozzle series. Nozzles are designed to provide the specified spray capacity, spray angle, optimal spray pattern (cross sectional shape of the spray) and spray distribution at each standard pressure. IKEUCHI sets an original inspection standard for the spray pattern, too.

Each pneumatic spray nozzle series also has spray capacity inspection standard at each standard pressure. Only the nozzles that pass the inspection will be shipped.

Note:

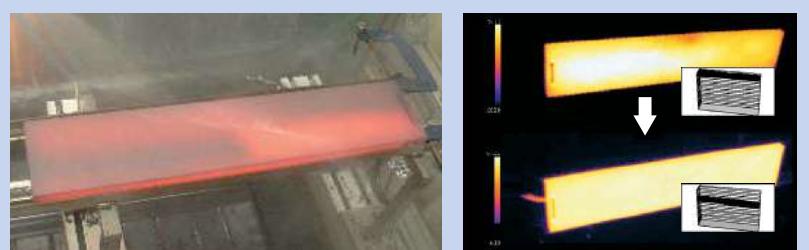

- 1) The figures in this catalog are based on tap water at room temperature and the liquid pressure is measured at the immediate upstream of the nozzle.
- 2) The above guarantee does not cover air nozzles. Air consumption (blowing air volume) shown in this catalog is for reference only.

Cooling technology

Slab cooling

For cooling of hot slabs, strong impact force is needed to break through the film boiling.

Through cooling trial experiments, we can provide the optimum nozzles and layout.

Thin slab cooling

Cooling for surface finishing of steel slabs requires a large amount of fine fog to produce a smooth surface texture.

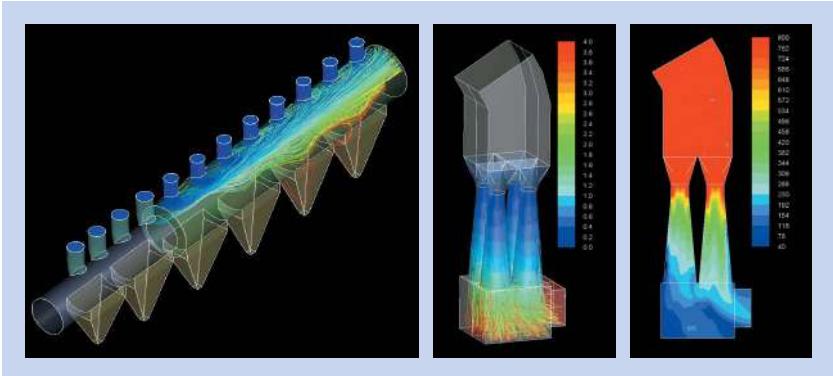

IKEUCHI has been developing low-energy atomizing nozzle units.

Flue gas cooling

Cooling of high temperature flue gas such as sintering exhaust requires spray control and droplet diameters that yield complete evaporation.

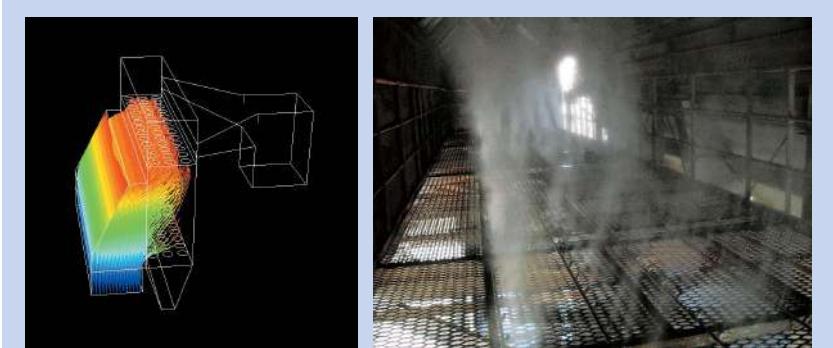

IKEUCHI uses CFD simulation when selecting the control system and nozzles that can provide completely evaporating spray.

Gas turbine inlet air cooling

Cooling of outdoor air is effective at countering the drop in power output of gas turbines in summer.

IKEUCHI provides gas turbine inlet air cooling systems that guarantee the cooling temperature.

Fog spray cooling systems

We provide custom systems including the appropriate nozzles, equipment and controls to meet our customers' needs.

By utilizing optimal system control technologies it becomes possible to achieve ideal cooling system performance.

■ Control devices (Valve stand)

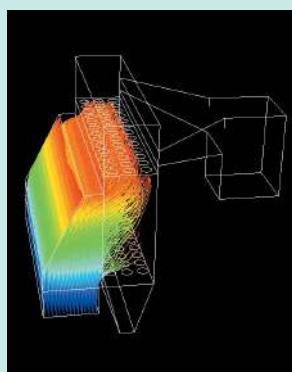

■ Control devices (Control panel)

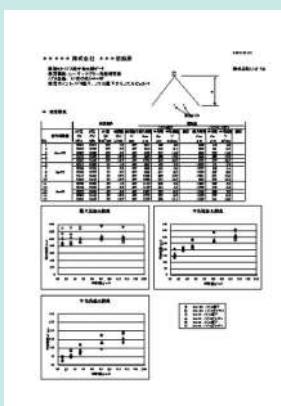

Profile of supporting data

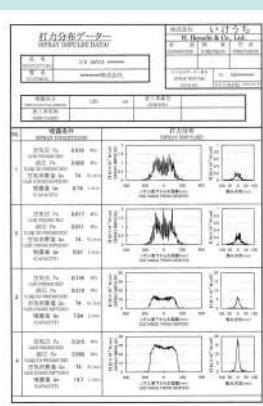

To aid in cooling nozzle selection, IKEUCHI can perform a variety of measurements and simulations.

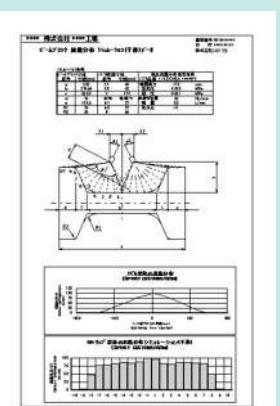

Thermo-fluid analysis data

Droplet diameter and speed reference charts

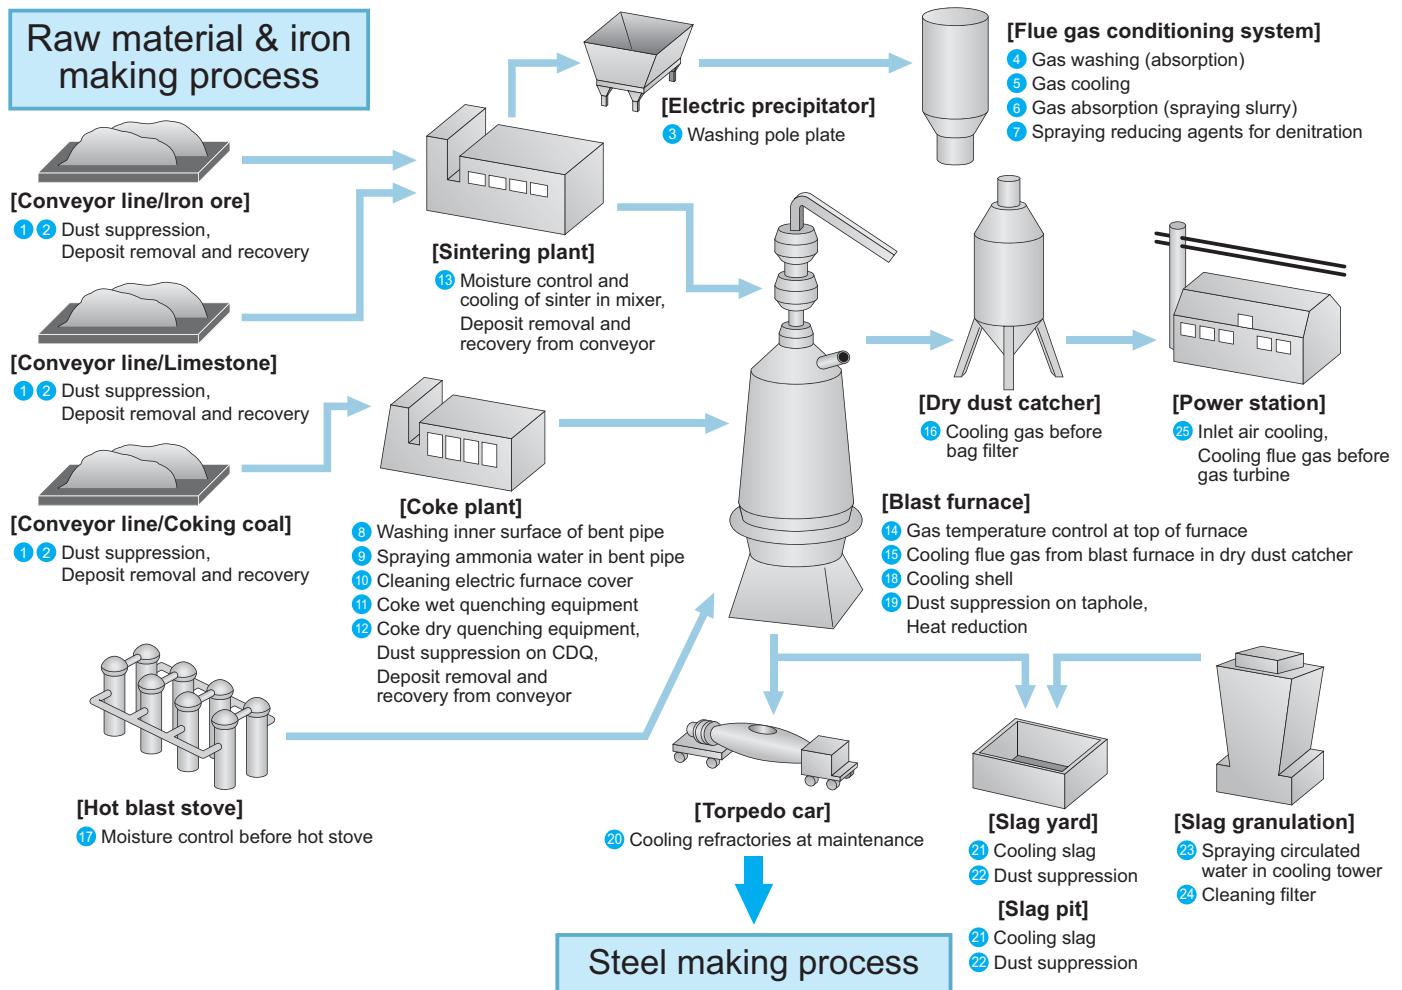

Spray impact distributions across width and thickness (for single unit)

Simulation of flow rate distribution at surface of a beam blank

Spray Nozzle Materials

In this catalog the materials of nozzles are described using the material codes listed below.

As "The Fog Engineers", we, IKEUCHI, have been developing nozzles in a variety of materials to meet the desires and applications of our customers. We were the first to develop ceramic orifice-inserted spray nozzles and succeed in marketing them throughout the world.

Listed below are the materials of nozzles and parts, and resistance characteristics of each material against common chemicals.

Metals [Material code Material] S303 Stainless steel 303 S304 Stainless steel 304 S316 Stainless steel 316 S316L Stainless steel 316L SCS13 Die-cast stainless steel equiv. to S304 SCS14 Die-cast stainless steel equiv. to S316 SCS16 Die-cast stainless steel equiv. to S316L S420J2 Hardened stainless steel 420J2 B Brass (C3604) TN Titanium Tungsten carbide	Plastics [Material code Material] PP Polypropylene PPS Polyphenylene sulfide PVC Polyvinyl chloride HTPVC Heat-treated polyvinyl chloride PTFE Polytetrafluoroethylene PVDF Polyvinylidene fluoride ABS Acrylonitrile butadiene styrene FRPP Glass-fiber reinforced polypropylene FRP Fiber-reinforced plastic PE Polyethylene UHMWPE Ultrahigh molecular weight polyethylene (UHMWPE) Araldite®H High-temperature epoxy resin (Adhesive)
Rubbers [Material code Material] NBR Nitrile rubber FKM Fluororubber FEP Tetrafluoroethylene-propylene rubber EPDM Ethylene-propylene rubber	
Ceramics CERJET® ceramics Alumina ceramics (Alumina 92%, etc.) [Material code Material] SiC Silicon nitride bonded silicon carbide SiSiC Sintered reaction-bonded silicon carbide	Araldite is the registered trademark of Huntsman Advanced Materials.
Others [Material code Material] Sa Sapphire

Note:

- The heat resistance (operating temperature limit) of spray nozzles varies widely depending on the operating conditions, environment, liquid sprayed, etc.
- Ceramic should be used at temperatures under 100°C to avoid a crack caused by heat shock.
- As for the spray nozzles including adhesive, please also take into account the heat/chemical resistance of the adhesive.

○ Suitable

How to Read the Tables

Shows steel making process where this nozzle is used, and its application
(See the pages 6–9 for nozzle applications for each process)

TDSS series Descaling Nozzles

Patented

Rolling Mills **Descaling**

FEATURES

Stabilizing strainer for making perfect straight flow.
Unique nozzle tip design produces razor-like sharp stream.
Water saving descaling nozzle, achieving higher impact with less water.

Photo of nozzle spraying under standard pressure

Technical data and examples of use are shown.

MATERIALS

A Nozzle tip

- Standard nozzle tip/Tip with cover
- Tip: Tungsten carbide
- Tip body: S303
- Long nose nozzle tip
- Tip: Tungsten carbide
- Tip body: S304

B Stabilizing strainer

- Standard/Long strainer
- Strainer adaptor: Brass
- Strainer: Brass or S316L*
- Stabilizer: S316L

③ Packing: Copper

④ Strainer adaptor

⑤ Stabilizer

⑥ Strainer

Types of Strainers

Types of Strainers	Outer dimensions (mm)			
	L ₁	L ₂	D	a
Standard strainer (type B)	126	52	30	25
Long strainer (type E)	173	52	30	25
Strainer with check valve (type LCV)	180	52	30	25.5

③ Packing: Copper

④ Strainer adaptor

⑤ Stabilizer

⑥ Strainer

Material description
In our catalogs and drawings, "S" represents "stainless steel", "B" represents "Brass C3604".
For the other material codes, please refer to "Spray Nozzle Materials" on page 10.

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 1/8M SSXP 020 S303

1/8M	SSXP	020	S303
Pipe conn. size	Spray capacity code	Material	
1/8M	020	S303	
1M	80	B	

Threads noted in this catalog are tapered pipe threads unless otherwise advised.

In "How to order" section, "M" of the pipe connection size indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

(Example)
1/4M: 1/4" male taper pipe thread, R1/4
1/4F: 1/4" female taper pipe thread, Rc1/4

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

The model number is a nozzle assembly description; comprised of nozzle tip, packing, and stabilizing strainer.

<Example> 3/8 TDSS 32083 KV-LCV (15°R)

Note: Please order caps and adaptors separately.

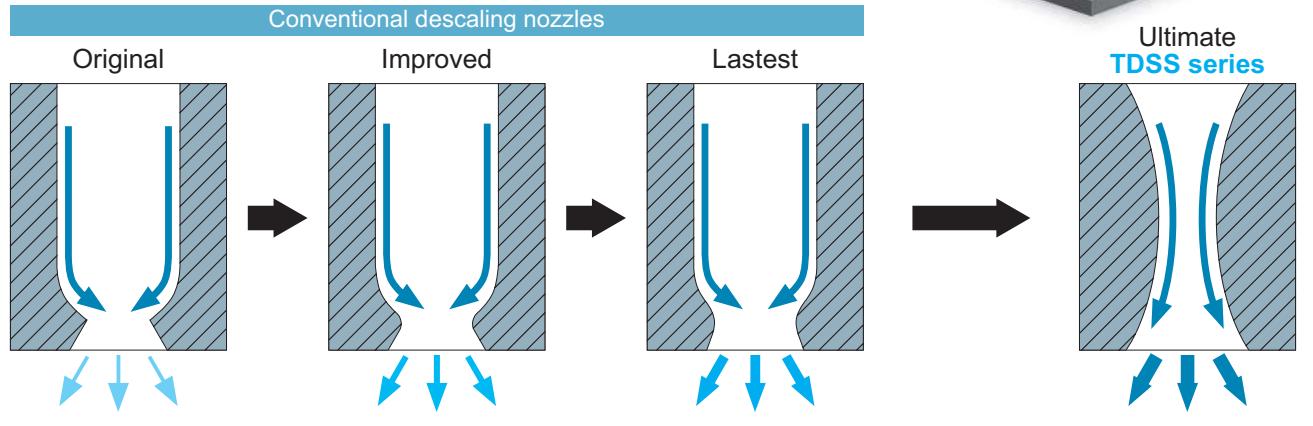

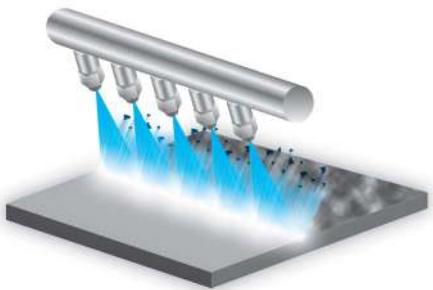

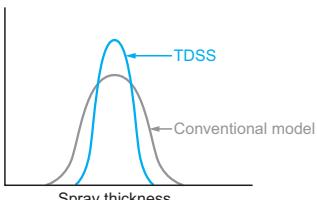

█ Cap material: S303
Optional: S420J2 (selective hardened)

█ Welding Adaptor: S403
Threaded adaptor: S303

For details, TDSS descaling nozzles catalog is available.

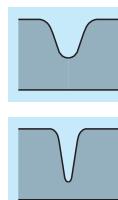

Uniquely designed descaling nozzle

TDSS series is designed to have no sharp protrusions inside its orifice, which minimizes energy-losses and maximizes the speed and spray impact of water flow, as well as the tip lifespan, even under high-pressure spraying.

**Three features of its unique design****Razor-like Thin Stream**

TDSS's **razor-like thin stream** has 20% higher impact compared to the conventional nozzles.

TDSS is designed to have uniform spray impact on the cross direction.

Thin Stream High Impact

Conventional model
 ● Depth: 0.5–0.7 mm
 ● Thickness: 5–6 mm
 ● Length: 82 mm

TDSS
 ● Depth: 0.8–1.1 mm
 ● Thickness: 4–4.5 mm
 ● Length: 83 mm

TDSS, with **much higher spray impact**, increases erosion depth by 20% compared to conventional model. Minimizing remaining scales improves productivity and quality.

High Impact Water Saving

Even with **10–20% less water**, TDSS provides the same spray impact as the conventional model.

	Conventional model	TDSS
Erosion depth	1.3 mm	1.3 mm
Spray capacity	134 ℥/min	110 ℥/min

Water saving effect

Example: Operating 2 hours a day, a TDSS series nozzle achieves

Water savings of 3 tons per day and 1,100 tons per year.

Offset angle changes descaling effect**Offset angle**

Water sprayed from nozzles often overlaps and weakens the spray impact force at the edges of the spray width. You can prevent the resultant scale remnants by providing a suitable offset angle (5–10 degrees).

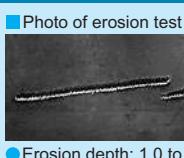

Offset angle 15°

Photo of spray

Erosion depth: 0.6 to 0.9 mm (Nozzle: TDSS40083)

Offset angle 5°

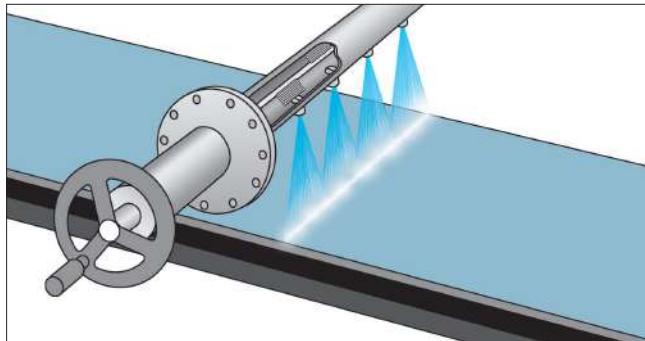

Photo of spray

Erosion depth: 1.0 to 1.3 mm (Nozzle: TDSS32083)

Surface finish

- Rinsing and pickling on the surface of steel plates
- Brush roll cleaning
- Cooling steel plate

**FEATURES**

Design allows brushes to easily remove foreign objects.

By rotating an internal brush, nozzle orifices are cleaned thoroughly.

Foreign objects are flushed away while the internal brushes are rotated.

Liquid inlet

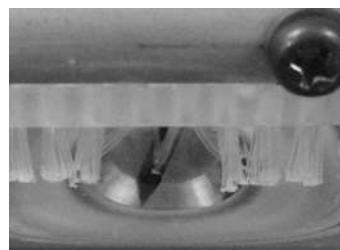

Brushes are turned by hand.

Drain

Mountain-shaped distribution to obtain a uniform spray distribution in multiple-nozzle arrangements.

Easily and effectively flush out foreign objects

By turning the handwheel an internal rotating brush scrubs the nozzle orifices to and discharges the debris.
Ideal for applications where nozzle clogging is a concern and maintenance is difficult.

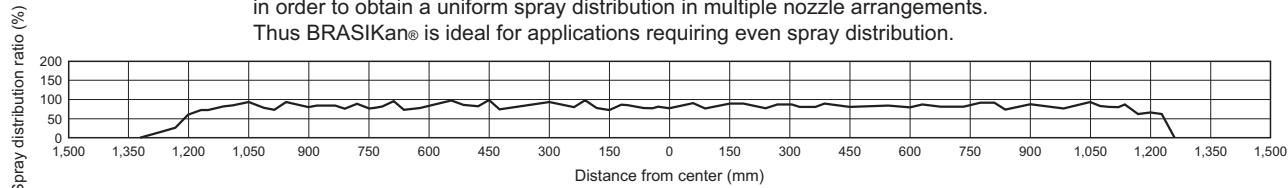

Inner brushes clean the nozzle orifice thoroughly.

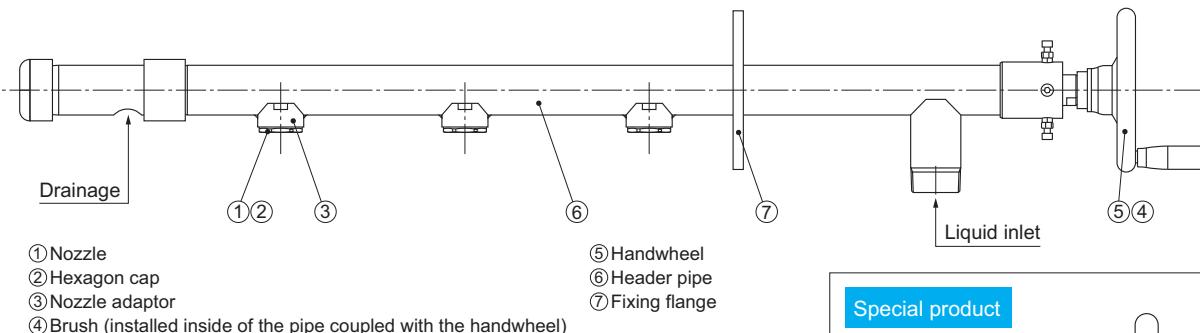

Foreign objects inside the pipe are flushed out through the drain.

Even spray distribution

BRASIKan® spray nozzles are designed to produce a mountain-shaped distribution in order to obtain a uniform spray distribution in multiple nozzle arrangements. Thus BRASIKan® is ideal for applications requiring even spray distribution.

Measuring conditions: 10 spray nozzles having 65° spray angle and 12 l/min spray capacity (per 1 pc.) at 0.3 MPa measured at spray pressure of 0.3 MPa and spray height of 275 mm, with nozzle spacing 250 mm.

BRASIKan® series

- ① Nozzle
- ② Hexagon cap
- ③ Nozzle adaptor
- ④ Brush (installed inside of the pipe coupled with the handwheel)

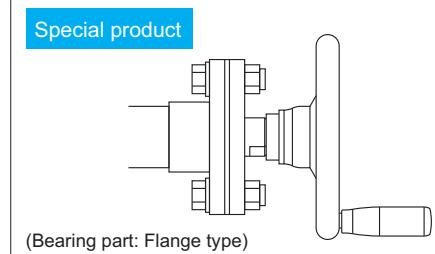

- ⑤ Handwheel
- ⑥ Header pipe
- ⑦ Fixing flange

Materials (depend on the liquid sprayed)

Liquid	Nozzle	Header (pipe)	Brush	Gasket
Water	S303	S304	PP / S304	PTFE
Alkaline / special liquids	S316L	S316 / S316L	S316L	PTFE
Acidic liquid	TN	FRP	PP	PTFE

BRASIKan® series

Air-driven Automatic Brush-cleaning Nozzle Header

Operation mode

Spray mode (0° brush position)

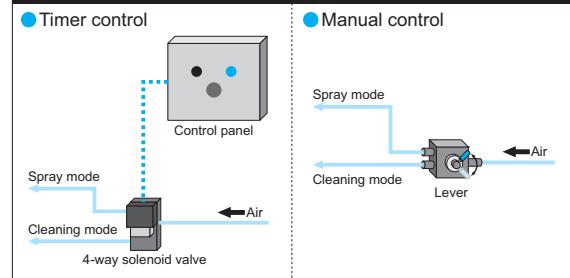

Nozzle cleaning mode (180° brush position)

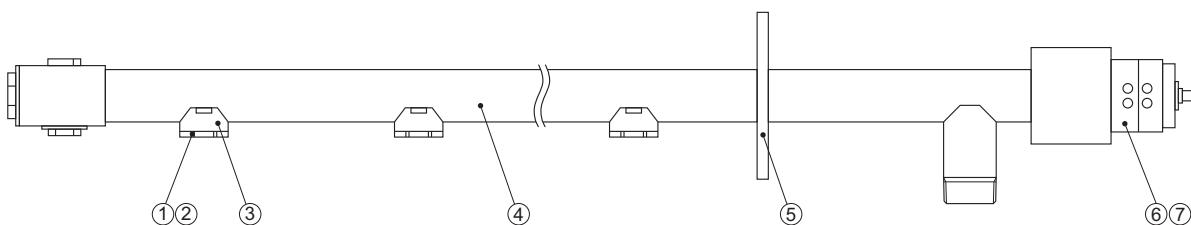

FEATURES

- The air-driven type BRASIKan allows remote control of spray and cleaning modes.
- Setting nozzle for automatic cleaning is also possible with a timer. Brush position rotates from 0° to 180°, and cleans the nozzle orifices thoroughly.
- Having no manual handle, it can be installed in a narrow, inaccessible place.

Control methods

BRASIKan® series

- ① Nozzle
② Hexagon cap
③ Nozzle adaptor
④ Header pipe

- ⑤ Fixing flange
⑥ Actuator
⑦ Brush (installed inside of the pipe coupled with the actuator)

How to order

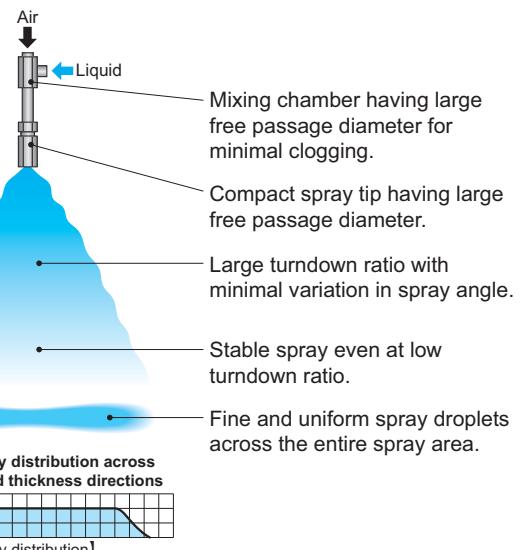

Inquiry drawing forms are available to ensure we can correctly meet the specifications you require.
Please inquire with us for details.

Steel making process

DDRP+AS series
Hydraulic/Pneumatic (Dual-use) Ultra-Thick Even Flat Spray Nozzles

Turndown ratio range of DDRP+AS series nozzles

Turndown ratio range of normal hydraulic spray nozzles at maximum pressure is limited by pump capacity, and at minimum pressure it is limited by narrower spray angle and unstable spray condition. When the max liquid pressure of water is 0.9 MPa, the turndown ratio of normal hydraulic spray nozzles is 1:4–4.5.

DDRP+AS series can keep stable spray at very low flow due to air pressure. When the maximum liquid pressure is 0.9 MPa, turndown ratio can be extended to 1:20.

	Spray capacity (ℓ/min)	Liquid pressure (MPa)	Air pressure (MPa)	Air consumption (ℓ/min , Normal)	Width	Thickness
Large	33	0.9	0.1	0		
Medium	19	0.3	0.1	0		
Small	1.55	0.01	0.1	29		

Turndown ratio range of hydraulic spray nozzle

Turndown ratio range of hydraulic spray nozzles at maximum pressure is limited by pump capacity, and at minimum pressure it is limited by narrower spray angle and unstable spray condition.

When the maximum liquid pressure is 0.6 MPa, the turndown ratio of hydraulic nozzle is 1:2.5–3.5.

Steel making process

- Cooling bloom, slab short side, billet
- Roll cooling

FEATURES

Built-in 0.05 MPa check valve.

Can be used as a hydraulic nozzle for high flow rates and as a pneumatic nozzle for better control at low flow rates, which allows optimal control over a wide range of flow rate with minimal air consumption.

Spray capacity turndown ratio is up to 1:20, while minimizing variation in spray angle and distribution.

Normal flat spray pattern with mountain-shaped distribution.

BIM series Small Capacity Fine Fog Nozzles

Raw material process

- Dust suppression on raw material conveyor line
- Spraying reducing agents for denitrification

Steel making process

- Cooling electrodes of electric furnace
- Roll cooling

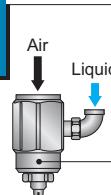

Rolling mill process

- Coil cooling

Surface finish

- Minimized spangle treatment of continuous galvanized steel
- Cooling steel plates after coating

FEATURES

Unique design minimizes clogging and offers longer product life.

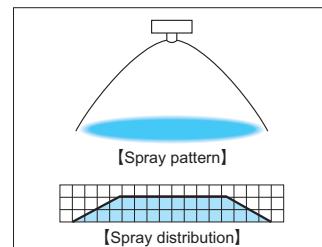

Produces fine atomization with mean droplet diameter of 100 µm or less.

Spray patterns in three types

BIMV Flat spray

[FEATURES]

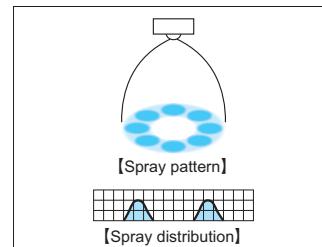

- Flat spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 µm or less.¹⁾
- When spraying at a low air-water ratio, BIMV nozzle produces uniform spray distribution. At a high air-water ratio, it produces a mountain-shaped distribution, but a uniform distribution can be achieved by using a multiple nozzle alignment.
- Three spray angles of 45°, 80°, and 110° are available.
- Eight types of adaptors are available.

BIMK Hollow cone spray

[FEATURES]

- Hollow cone spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 µm or less.¹⁾
- Spray angle is 60°.
- Eight types of adaptors are available.

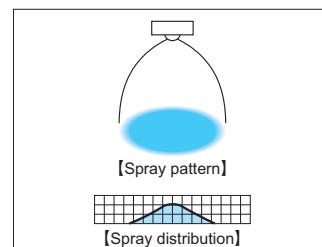

BIMJ Full cone spray

Patented

[FEATURES]

- Full cone spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 µm or less.¹⁾
- Two spray angles of 20° and 70° are available.
- Eight types of adaptors are available.

*1) Droplet diameter measured by laser Doppler method

■ Main material of BIM series is S303.

Spray angle and spray capacity code

■ Operating pressure: Air pressure = 0.2–0.4 MPa, Liquid pressure = 0.1–0.3 MPa

Series (Spray pattern)	Spray angle code	Air consumption code				
		02	04	075	15	22
BIMV (Flat spray)	110	○	○	○	○	○
	80	○	○	○	○	○
	45	○	○	○	○	○
BIMK (Hollow cone spray)	60		○	○	○	○
BIMJ (Full cone spray)	70		○	○	○	○
	20	○	○	○	○	○
Spray capacity range (ℓ/hr)		1–10	2–20	4–40	8–80	11–110
Air consumption per nozzle (ℓ/min, Normal)	Air pressure = 0.2 MPa	15	27	54	113	150
	Air pressure = 0.3 MPa	20	36	74	150	220
	Air pressure = 0.4 MPa	25	46	94	190	250

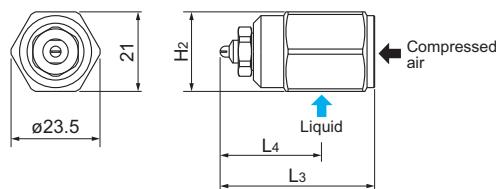

Note: Nozzle description should be indicated as, e.g. "BIMV11002S303+...".
Please see How to order on page 26.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

Types of adaptors and features

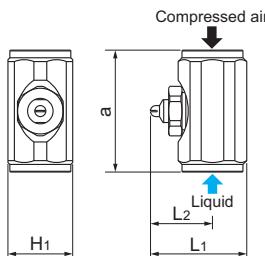

Type T

Air inlet is on the center line and liquid inlet is on a 90° angle line to the center line. Suitable for use in a small space.

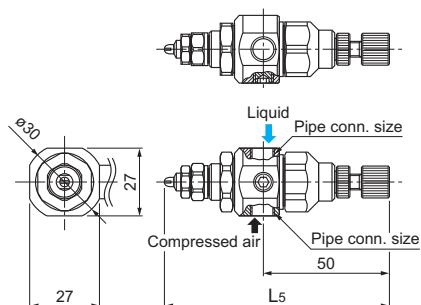

Type N

Liquid and air enter into adaptor from both sides.

Type NDB

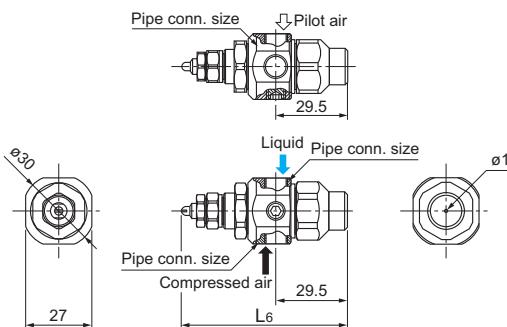

Spray capacity is adjustable with needle valve.

Type SPB

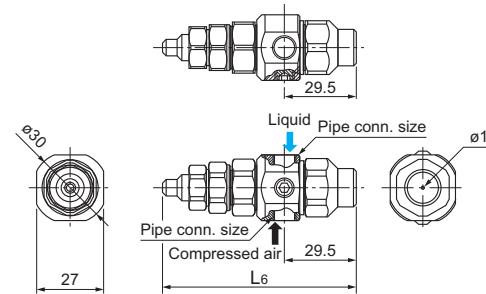

Spray ON/OFF can be regulated by switching the pilot air ON/OFF.

The pilot air actuates an internal piston to regulate the spray.
(Pilot air pressure more than 0.2 MPa required)

Type SNB

Spray can be regulated by turning compressed air ON/OFF, which actuates an internal piston, to open or close the nozzle.
(Compressed air pressure over 0.2 MPa starts the spray.)

Ball joint type adaptor

- Spray direction can be adjusted within +/- 15° by means of a ball joint.
- It is ideal for fine-tuning of spray direction after pipe assemblies have been completed.
- Ball joint types are UNDB, USPB, and USNB adaptors.
(e.g., UNDB = NDB-type adaptor including a ball joint)

■ Pipe connection size and Mass

Air consumption code	Dimensions (mm)								
	L1	L2	L3	L4	L5	L6	a	H1	H2
02	25.3	16.3	40.8	24.8	87.3	66.8	32	17	21

15	39.1	26.6	60.1	38.1	97.8	77.1	43	23	29
22	41.3	28.8	62.3	40.3	99.8	79.3	43	23	29

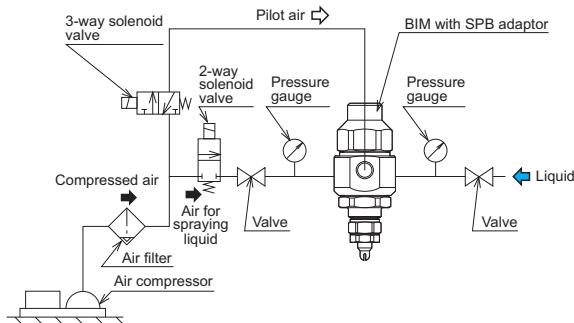

Adaptor	Air consumption code	Pipe connection size			Mass (g)
		Compressed air	Liquid	Pilot air	
N	02,04,075	Rc1/8	Rc1/8		55
	15,22	Rc1/4	Rc1/4		130
T	02,04,075	Rc1/8	Rc1/8		80
	15,22	Rc1/4	Rc1/4		210
NDB (UNDB)	02,04,075	Rc1/8	Rc1/8		172
	15,22				193
SPB (USPB)	02,04,075	Rc1/8	Rc1/8	Rc1/8	146
	15,22				167
SNB (USNB)	02,04,075	Rc1/8	Rc1/8		151
	15,22				172

How to use BIM controlling adaptors

■ SPB adaptor

Spray (ON/OFF) can be regulated by switching the pilot air ON/OFF. The pilot air actuates an internal piston to regulate the spray. The pilot air pressure must be 0.2 MPa or higher. As even low pressure atomizing air can be used, production of a range of fine to coarse fog is possible. Best-suited for when there is concern about scattering droplets.

Connection example

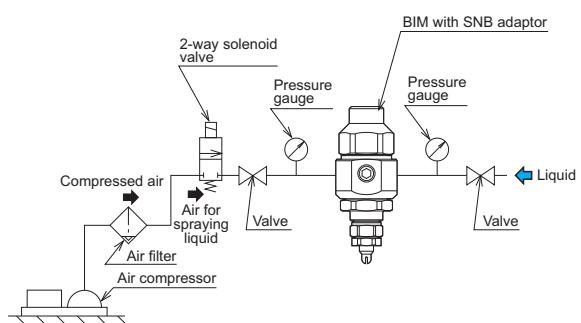

Function chart

Compressed air		ON		
Pilot air	OFF	ON	OFF	ON
Liquid	Stop	Spray	Stop	Spray

■ SNB adaptor

Spray (ON/OFF) can be regulated by turning compressed air ON/OFF. Compressed air pressure must be 0.2 MPa or higher in order to start the spray.

Connection example

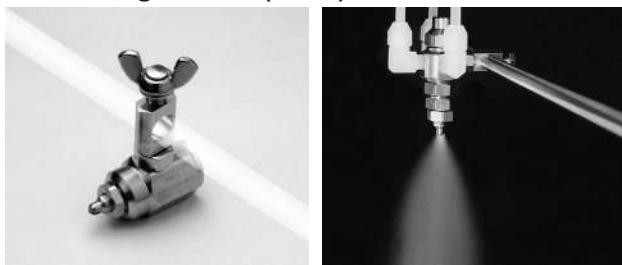

Function chart

Compressed air	OFF	ON	OFF	ON	OFF
Liquid	Stop	Spray	Stop	Spray	Stop

Optional product

■ Mounting bracket (MBW)

Mounting bracket enables easy fixing of a nozzle on a pole with desired spray direction.

Available in two size for pipe diameters of 8 mm and 10 mm.
Available for the adaptor types T, NDB, UNDB, SPB, USPB, SNB, and USNB (not available for N-type adaptor).

How to order

Please inquire or order for a specific nozzle using this coding system.

BIM Header**Integrated Spray Header with BIM Fine Fog Nozzles****Iron making process**

- Cooling refractories of hot metal runner

Steel making process

- Cooling ladle and tundish at maintenance

Rolling mill process

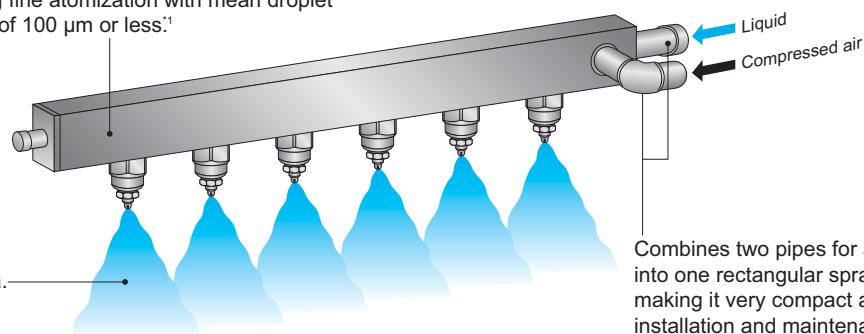

- Cold rolled sheets wetting processing

Surface finish

- Minimized spangle treatment of continuous galvanized steel
- Cooling for CGL sheets after alloying furnace
- Fog cooling for EGL sheets

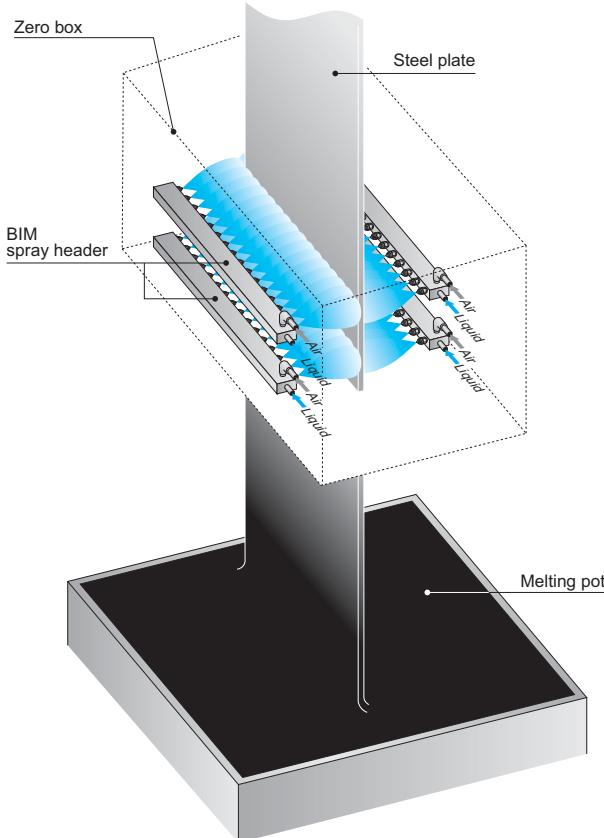

Integrated multiple-nozzle header**FEATURES**

Spray header equipped with BIMV nozzles producing fine atomization with mean droplet diameter of 100 µm or less.*1

Combines two pipes for air and liquid into one rectangular spray header, making it very compact and easy for installation and maintenance.

*1) Droplet diameter measured by laser Doppler method

BIM spray header used for minimized spangle

BIM nozzle, which atomizes surface treatment liquid, can be sprayed on steel plates effectively and uniformly at high speed. Unique design of BIM nozzles minimizes clogging and achieves long-time continuous spray.

Clogging comparison in pneumatic spray nozzles**Test conditions**

Pa: Compressed air pressure, Pw: Liquid pressure

★ BIM nozzle: Pa=0.3 MPa, Pw=0.26 MPa, Spray capacity=15 ℓ/hr

Competitor's nozzle A:

Pa=0.3 MPa, Pw=0.28 MPa, Spray capacity=15 ℓ/hr

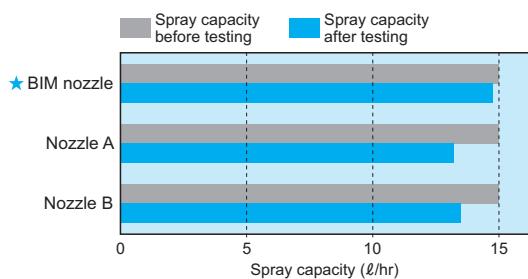

Competitor's nozzle B:

Pa=0.3 MPa, Pw=0.22 MPa, Spray capacity=15 ℓ/hr

Used liquid: Excel 601, 10% dilution Continuous spraying

Test results

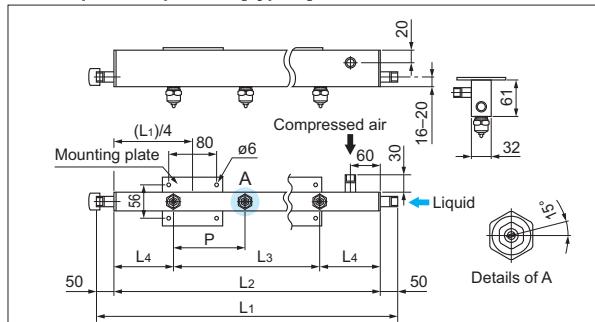

The figure below shows the change in the spray capacity after spraying for 50 hours.

Specifications of BIMV6006Z nozzle for zero/minimized spangle

● Flow-rate diagram

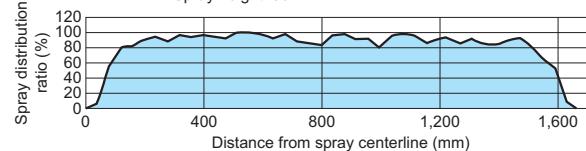

■ How to read chart

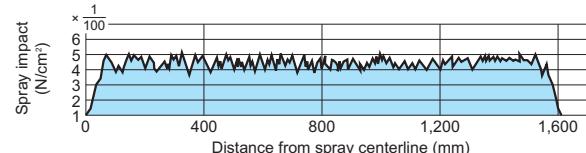

- ① The above spray capacity shown is for one nozzle.
 - ② Black lines (—) represent liquid pressures P_w in MPa.
 - ③ Blue lines (—) represent compressed air pressures P_a in MPa.

● Spray distribution

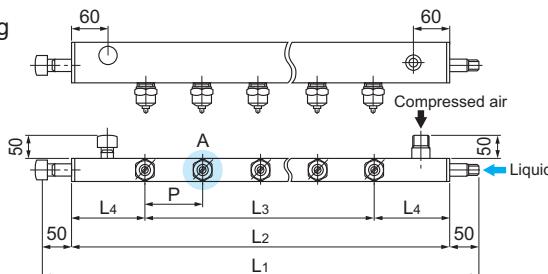

[Spray conditions] Compressed air pressure: 0.4 MPa, Liquid pressure: 0.2 MPa,
Spray height: 50 mm

● Spray impact distribution

● Drawing

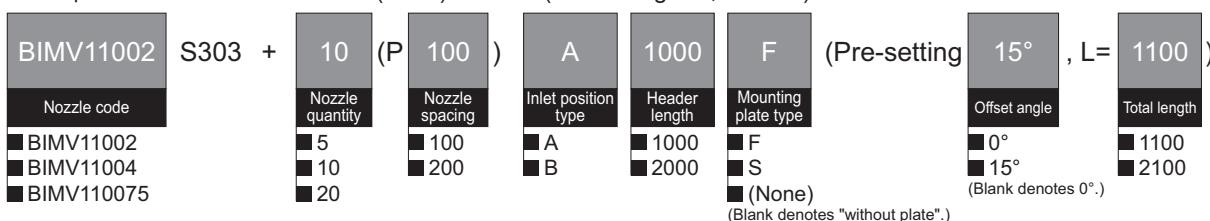

- P: Nozzle spacing
- L₁: Total length
- L₂: Length of rectangular spray header
- L₃: Distance between nozzles of both ends
- L₄: Distance to nozzle from the end of header
- θ_o: Offset angle (nozzle tip angle to axis of header)

How to order

To determine specifications, please specify a nozzle code, nozzle quantity, nozzle spacing, and header length etc., using this coding system.

<Example> BIMV 11002 S303 + 10 (P100) A1000F (Pre-setting 15°, L=1100)

Note: Inquire with us for integrated spray header for zero/minimized spangle control.

GSIMII
series**Large Capacity Fine Fog Nozzles****Iron making process**

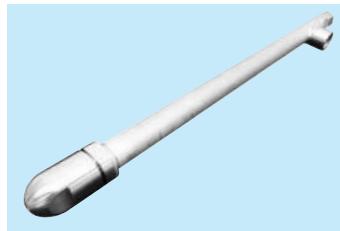

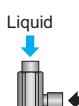

- Gas cooling before turbine
- Cooling refractories of torpedo car before maintenance
- Dust suppression at casting of pig iron

Steel making process

- Cooling converter shell at maintenance
- Cooling flue gas from electric furnace
- Dust suppression at casting of steel

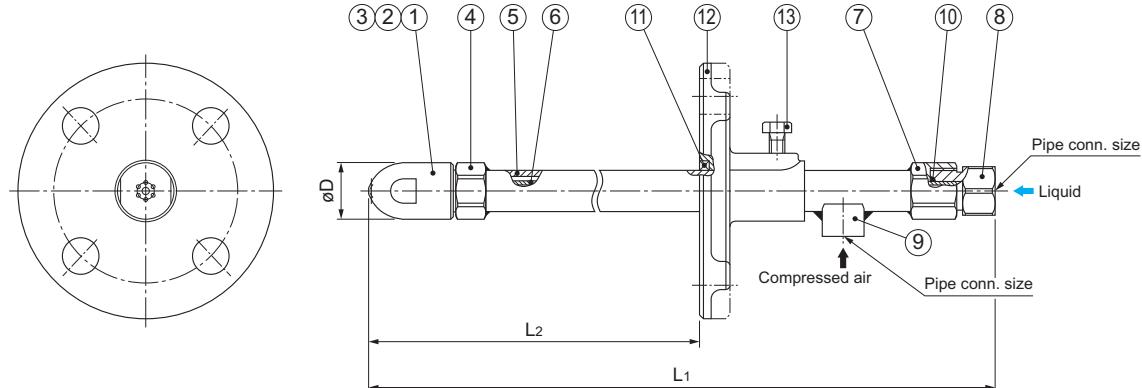

Rolling/ Surface finish

- Cooling flue gas from heating furnace
- Dust suppression at rolling mill outlet

**FEATURES**

Simple structure and easy maintenance.

Available in spray angle 60° or 20°.

Fine atomization with the maximum droplet diameter of 150 µm¹.Mean droplet diameter is 50 µm¹ at spray capacity of 500 l/hr with an air-water ratio of 130.¹⁾ Droplet diameter measured by laser Doppler method**GSIMII series****MATERIALS**

Type of length

Type	Total length L ₁ ³ (mm)	Length L ₂ (mm)
A	560	300–400
B	760	400–600
C	960	600–800
D	1,160	800–1,000

³⁾ L₁: Standard length**Mass**

Air consumption code	Length type	Mass (g) ⁴
37, 55	A	1,300
	B	1,600
	C	2,000
	D	2,400
75, 110	A	1,800
	B	2,300
	C	2,800
	D	3,300
150, 220	A	2,500
	B	3,100
	C	3,700
	D	4,300

⁴⁾ The mass shown is when the total length is the standard length L₁ and excludes a mass of flange.

For longer lengths, add the corresponding mass for each 100 mm of length as below.

(Air consumption code: Mass per 100 mm)

37/55: 180 g, 75/110: 260 g, 150/220: 300 g

Dimensions

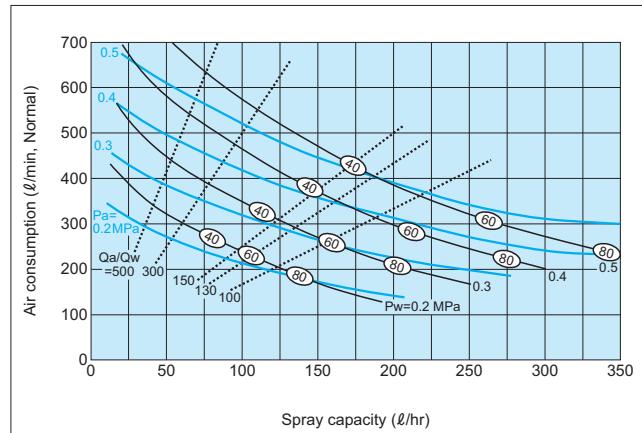

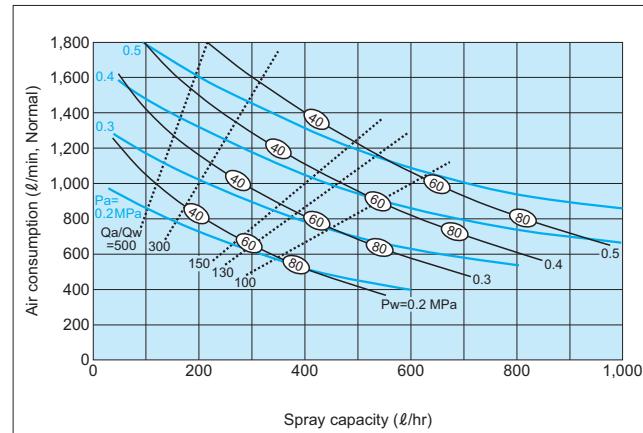

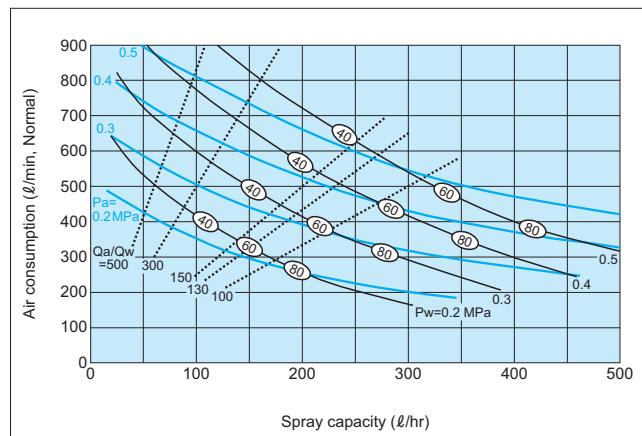

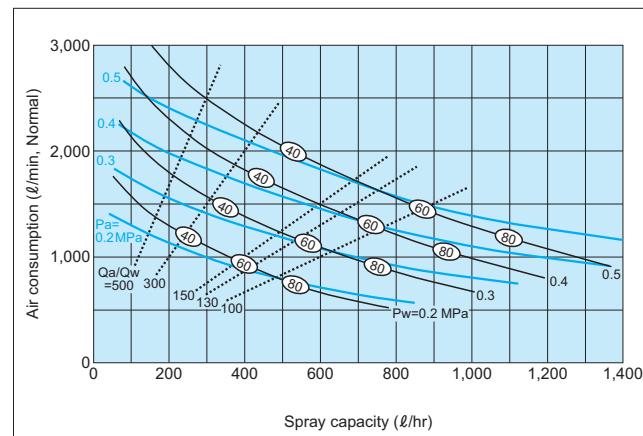

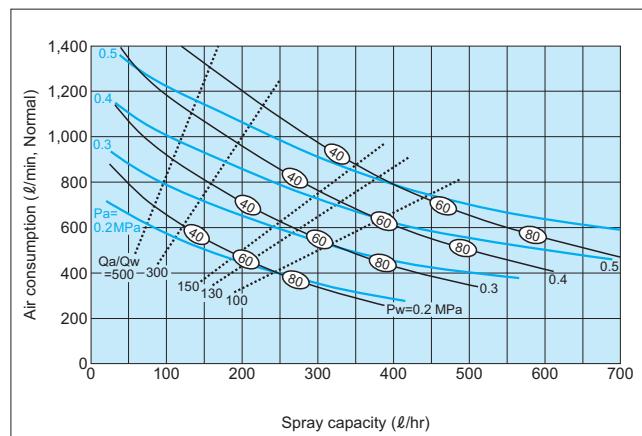

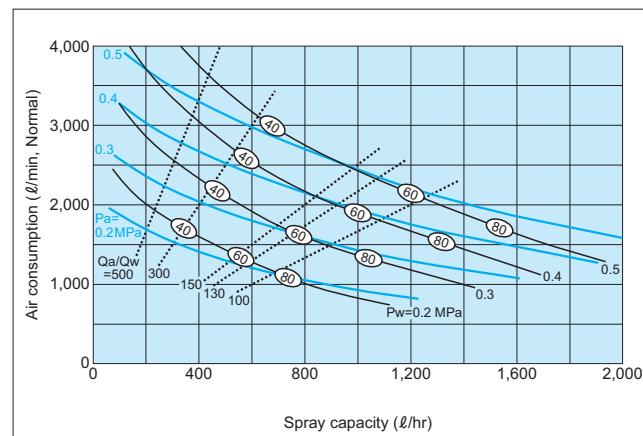

Spray angle code	Air consumption code	Pipe connection sizes		Outer diameter (ØD) (mm)	Free passage diameter (mm)	
		Air	Liquid		Liquid ²	Air
60 20	37	Rc3/8	Rc3/8	30	1.8 (2.2)	1.6
					2.2 (2.2)	2.0
					2.6 (3.2)	2.3
	55	Rc1/2	Rc1/2	38	3.2 (3.2)	2.9
					3.7 (4.0)	3.3
					4.0 (4.0)	4.0
220	110 150	Rc3/4		50		

²⁾ Free passage diameter in () shows that of GSIMII with spray angle code of 20.

GSIMII Flow-rate diagrams (Spray angle 60° type)

- The spray capacity shown is for one nozzle.
- Blue lines represent compressed air pressures P_a in MPa, solid black lines represent liquid pressures P_w in MPa, and dotted lines represent air-water ratio Q_a/Q_w .
- Figures in ovals  indicate Sauter mean droplet diameters (μm) measured by laser Doppler method.

Conversion of unit [Pressure] 0.1 MPa \approx 14.50 psi [Flow rate] 1 l (liter) \approx 0.26 US gal.
10 psi \approx 0.07 MPa 1 US gal. \approx 3.79 l (liter)

YYA
series

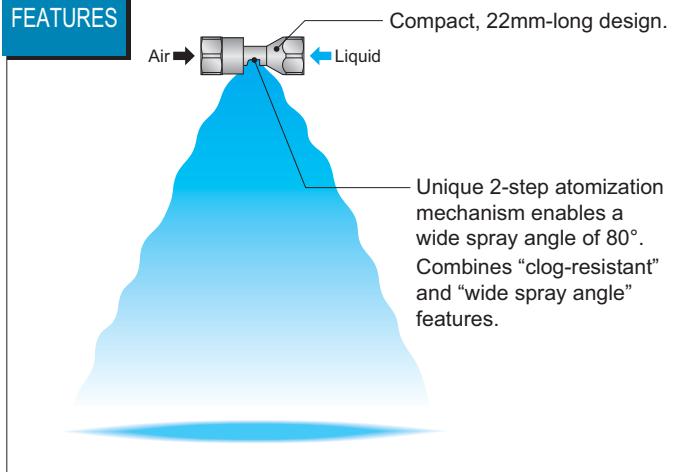

Wide-angle Flat Spray Pneumatic Spray Nozzles

Raw material process

- Dust suppression on raw material conveyor line

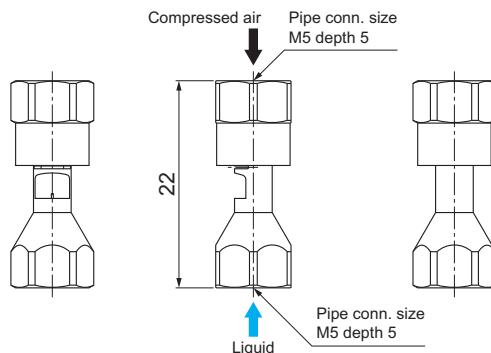

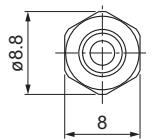

FEATURES

YYA series

MATERIAL S303

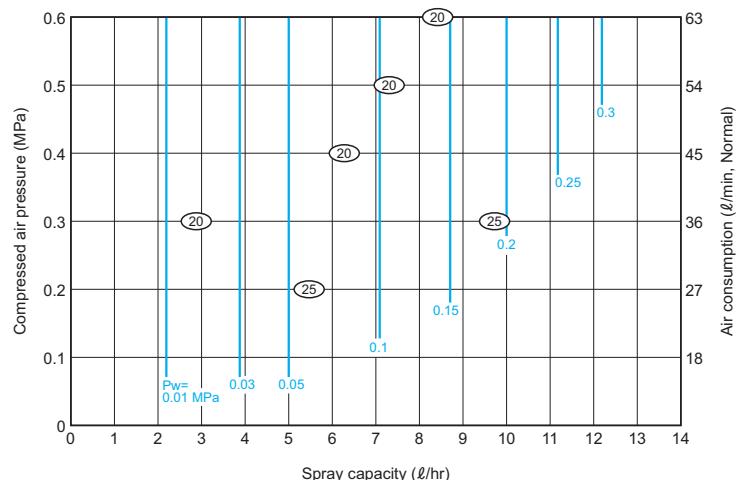

MASS 5 g

YYA Flow-rate diagram

How to read the chart

- The spray capacity shown is for one nozzle.
- Figures at the foot of each line indicate liquid pressures P_w in MPa.
- Figures in ovals indicate Sauter mean droplet diameters (μm) measured by laser Doppler method.

Spray angle code ^{*1}	Air consumption code	Air pressure (MPa)	Air consumption (l/min, Normal)	Spray capacity (l/hr)				Spray width (mm) ^{*2}				Mean droplet diameter (μm)	Free passage diameter (mm)		
				Liquid pressure (MPa)				Liquid pressure (MPa)					Liquid	Air	
				0.01	0.05	0.1	0.2	0.01	0.05	0.1	0.2				
80	04	0.2 0.3 0.4 0.5	27 36 45 54	2.2	5.0	7.1	10.0	160 170 170 180	170 170 180 180	170 180 190 200	— 190 200 210	15–30	0.4	0.2	

*1) Spray angle measured at compressed air pressure of 0.3 MPa and liquid pressure of 0.05 MPa

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 l (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 l (liter)

*2) Spray width measured at 100 mm from nozzle

Note: Spray capacity and spray angle are reduced when viscous liquid is sprayed.

How to order

Please inquire or order using this product code.

- 10
- 30
- 60

Steel making process

- Cooling of electrodes of electric furnace
- Cooling bloom, billet

Rolling mill process

- Controlled cooling of steel plates
- Cooling of shaped steel
- Surface treatment of rolled sheets (Chemical spraying, rinsing)
- Cooling of plates and rolls in hot strip mills

FEATURES

Available in S303, Brass, or PP.

Standard flat spray pattern with mountain-shaped distribution.

VVP series

MATERIALS

- S303 or B (brass), PP (injection-molded polypropylene)
- S316L equivalent (precision-molded stainless steel)^{*2}
- Strainer for precision-molded stainless steel: S303 or S316

OPTIONAL MATERIAL:

S316, PVC, PVDF, Ultrahigh molecular weight polyethylene, or others

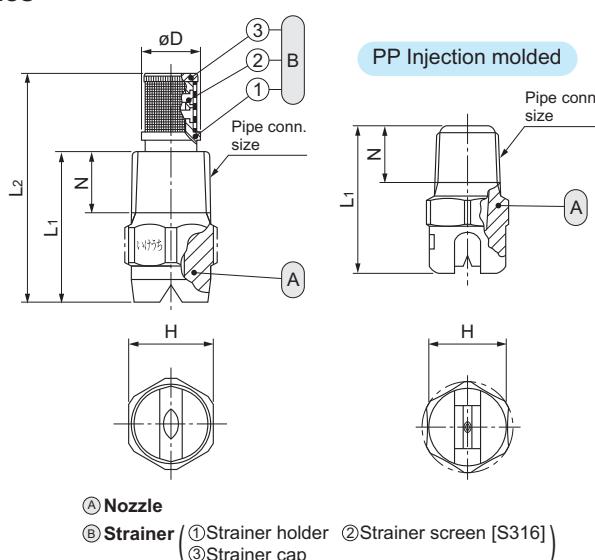

Series	Pipe conn. size	Dimensions (mm)					Mass (g)		
		L1	L2	H	øD	N	S303	B	S316L equiv.
VVP ^{*1}	R1/8	18.5	31	12	7.5	6.5	10	11	—
	R1/4	25	40	14	10	10.5	21	23	—
	R3/8	30	—	19	—	10.5	37	40	—
	R1/2	38	—	23	—	14	65	70	—
	R3/4	45	—	29	—	15	110	120	—
VVP ^{*2} (Precision-molded stainless steel)	R1	55	—	35	—	18	170	180	—
	R1/8	20	33.5	12	7.5	7	—	—	9.6
	R1/4	27	41	14	10	10.5	—	—	16
VVP (Injection molded)	R1/8	22	—	12	—	8.5	—	—	1.1
	R1/4	27	—	14	—	11.5	—	—	2.2

When with a strainer, add 2–5 g to the above mass.

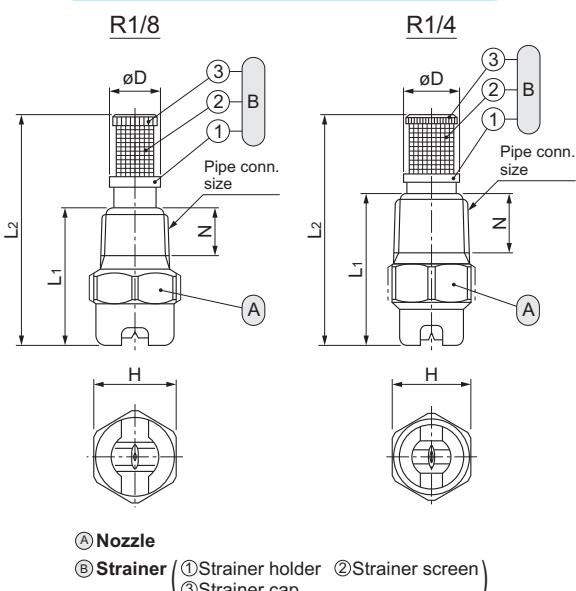

*1) VVP nozzle with spray capacity code of 20 or smaller slightly differs in dimensions (L₁, L₂) and in shape of nozzle tip from the above.
Please contact distributor for details.

*2) Please refer to the chart on page 42 for availability.

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

Precision-molded stainless steel

**"M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

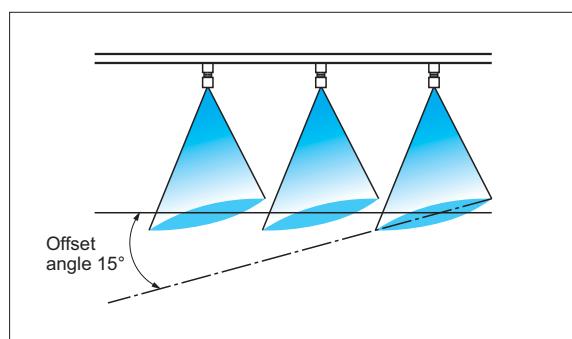

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

Uniform spray distribution with multiple VVP nozzle alignment

The standard flat spray nozzle is designed to produce a mountain-shaped distribution in order to obtain uniform spray distribution in multiple nozzle alignment. If some nozzles do not spray as specified, the desired spray distribution in nozzle alignment can not be obtained. This is why IKEUCHI guarantees our precision nozzle performance.

By positioning nozzles with an offset angle of 15° and overlapping at both ends, interference from adjacent sprays is prevented and uniform spray distribution can be maintained.

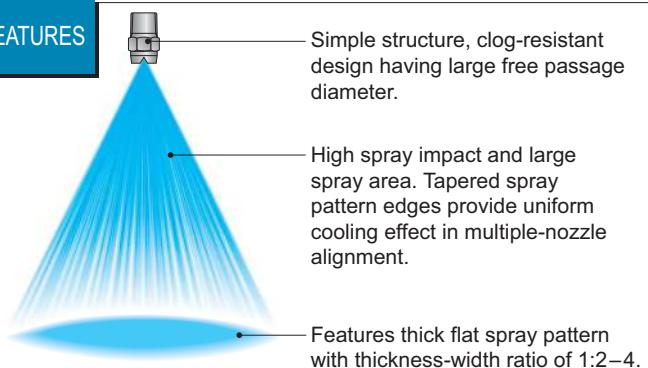

Rolling mill process

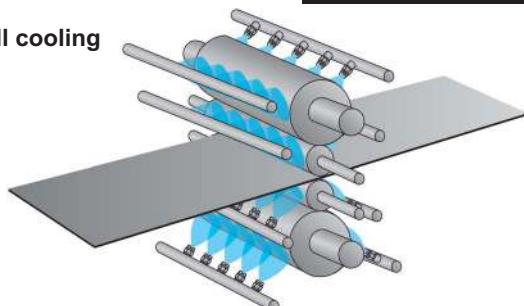

- Roll cooling
- Cooling steel plates

FEATURES

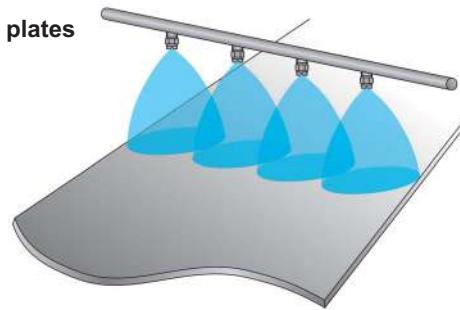

● Roll cooling

WVVP achieves uniform and effective cooling.

● Cooling steel plates

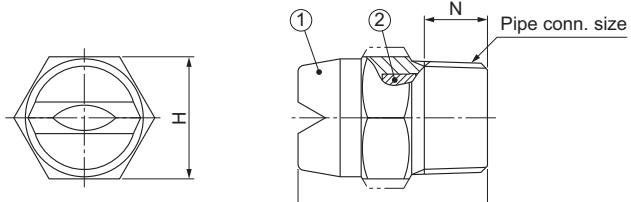

WVVP provides a wide and uniform cooling zone.

<Example> 1/4M VVEP 9040 S303

**"M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

Plate/Hot strip mill

- Roll cooling
- Cooling plates and steel sheets
- Cooling casted steel

FEATURES

Features a thicker flat spray compared with standard flat spray nozzles.

High spray impact and large spray area achieve uniform cooling.

Thick flat spray pattern with thickness-width ratio of 1:3–4.
(Spray angle in thickness direction is 25°)

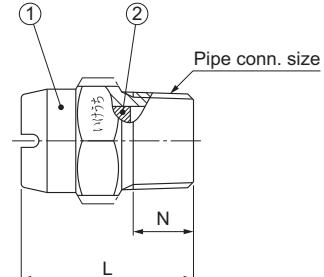

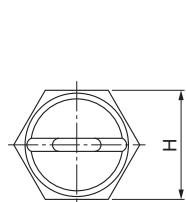

Thickness

	120	80	80	11.0	12.0	15.5	18.3	21.9	31.0	590	2.6

Cautions for use

Spray pressure must be 0.25 MPa or higher to provide stable spray pattern.
Low pressure causes unstable spraying since EJVV series nozzle takes in surrounding air.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 l (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 l (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

- Cooling steel H-beam flanges
- Controlled cooling of plates

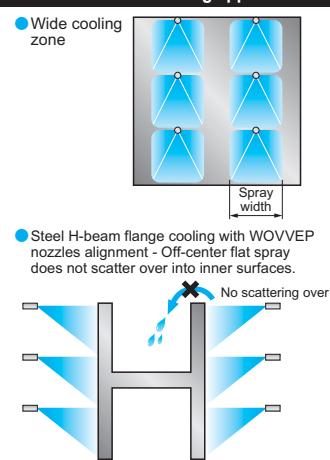

Please contact us for details.

FEATURES

WOWVEP used in cooling applications

MOMOJet®
series

Self-cleaning Flat Spray Nozzles

Cold rolling mill process

- Cooling steel plate
- Cleaning rolling mill

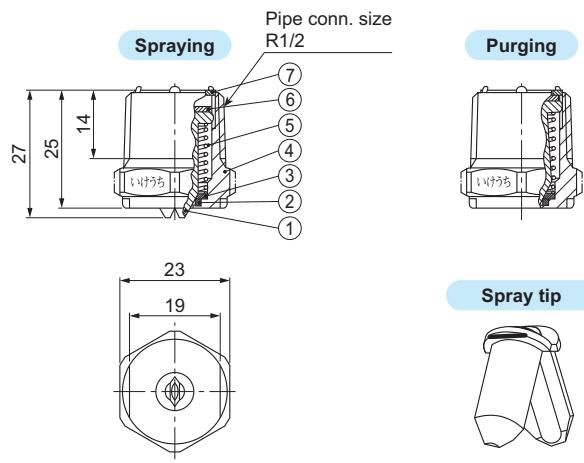

FEATURES

MOMOJet® series

MATERIAL S303

MASS 45 g

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

Spray capacity code	Spray angle (°)		Spray capacity (ℓ/min)								Mean droplet diameter (μm)	Free passage diameter	
	0.3 MPa	0.7 MPa	0.2 MPa	0.3 MPa	0.5 MPa	0.7 MPa	1 MPa	1.5 MPa	2 MPa	Spraying (mm)	Purging (mm)		
20	80	86	1.63	2.00	2.58	3.06	3.65	4.47	5.16	300	0.8	3.0	
40	80	83	3.27	4.00	5.16	6.11	7.30	8.94	10.3	—	1.2	3.3	
60	80	83	4.90	6.00	7.75	9.17	11.0	13.4	15.5	490	1.5	3.5	

Cautions for use

1. To start spraying a flow rate of about 9 ℓ/min at 0.05 MPa is required for all models because the spray tip opens wide. Select an appropriate pump.

2. MOMOJet® is designed to start spraying at the pressure of 0.1 MPa. Use MOMOJet® at 0.2 MPa and greater.

3. Since MOMOJet® series nozzles have active spray tips, the spray capacity is only guaranteed within +/-10% and the spray angle within +/-10° under standard pressure.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

Please inquire or order for a specific nozzle using this coding system.

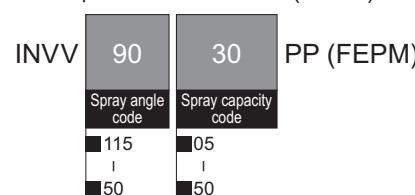

① Complete unit

<Example> 1/8M INV V 90 30 PP(FEPM)+PP

② Nozzle tip only

<Example> INV V 90 30 PP(FEPM)

**"M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

JJXP
series

Standard Full Cone Spray Nozzles

Iron making process

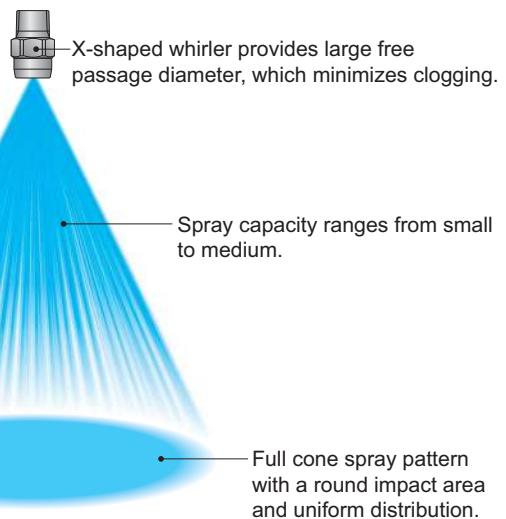

- Gas temperature control at the top of furnace

Steel making process

- Cooling steel in CCM
- Cooling shell and cover of electric furnace

FEATURES

JJXP series

MATERIALS

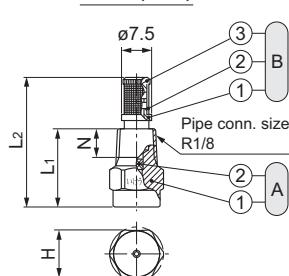

- Sizes R1/8–R3/8 (Rc3/8): S303
- Sizes Rc1/2–Rc1: S303 or B (brass)
- Sizes Rc1^{1/2} or larger: S316
- Whirler material is mainly S316L equivalent, but depending on nozzle codes, S316 equivalent or SCS16 whirlers are used.

OPTIONAL MATERIAL:

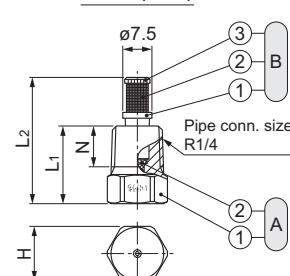

S316, S316L,
PP, PTFE (for Rc3/8 sizes and over)

Thread size of optional material may differ depending on materials.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 l (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 l (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 1/8M JJXP 005 S303W

*1) "M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

*2) When spray capacity code is 005–030, pipe connection size for R1/4 is indicated as "1/4x1/8M".

*3) See "MATERIALS" information on page 54 for standard materials by each size.

AJP
series

Clog-resistant Vaneless Full Cone Spray Nozzles

Raw material process

- Gas absorption in flue gas desulfurization
- Cleaning of precipitator electrodes
- Spraying ammonia water in bent pipe

Steel making process

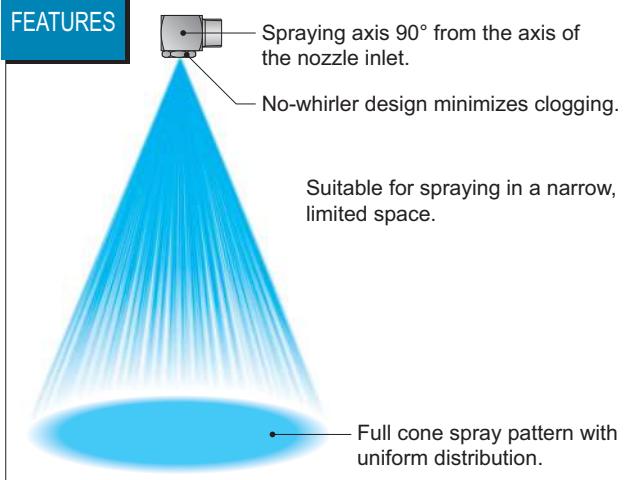

- Cooling shell and cover of electric furnace

Rolling mill process

- Controlled cooling of reverse side of steel
- Spray cooling in continuous annealing

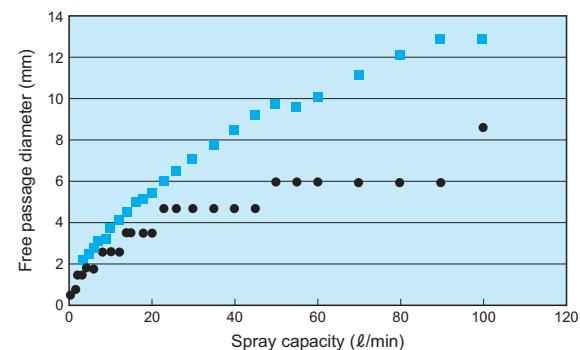

FEATURES

Free passage diameter comparison:
AJP series vs. other full cone spray nozzles

Due to its unique vaneless design (no blockages inside nozzle), AJP series has the largest free passage diameter of all of our full cone spray nozzles.

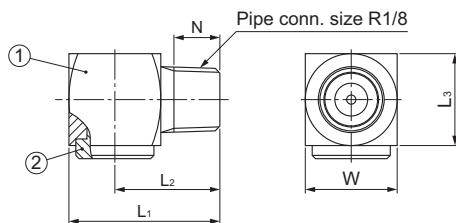

This is why AJP series nozzles are ideal for applications where clogging is a concern such as spraying slurry.

● Conventional full cone spray nozzles
■ AJP series nozzles

AJP series

TAA
series**Wear-resistant Large Capacity Hollow Cone Spray Nozzles****Raw material process**

- Gas absorption in flue gas desulfurization

Iron making process

- Recycled water spraying in water granulation process (spraying in cooling tower)

**TAA series available range**

Flange connection size (inches)	at pressure of 0.07 MPa		Free passage diameter (mm)
	Spray angle (°)	Spray capacity (ℓ/min)	
2	67	200–300	28–33
3	67–80	400–800	38–57
4	80	1,000–1,200	63–68

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

FEATURES

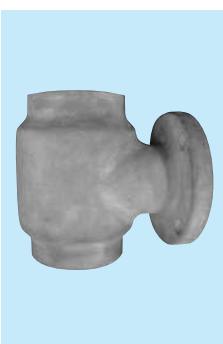

Select from two wear-resistant materials, Sic or SiSiC. Flanged connection.

Lightweight (less than half the weight of metal nozzle) with large free passage diameter.

Stable hollow cone spray pattern under low pressures.

TWAA
series**Wear-resistant Bi-directional Hollow Cone Spray Nozzles****Raw material process**

- Gas absorption in flue gas desulfurization

**TWAA series available range**

Standard pressure: 0.07 MPa
Spray capacity range: 200–1200 ℓ/min
Connection flange size: 2–4 inches

FEATURES

Two hollow cone spray patterns sprayed in 180° opposite direction.

Select from two wear-resistant materials, Sic or SiSiC. Flanged connection.

Excellent atomization for large flow rates. Well-suited for contact, reaction applications.

JUXP
series**Wear-resistant Full Cone Spray Nozzles****Raw material process**

- Gas absorption in flue gas desulfurization

**JUXP series available range**

Pipe connection size (inches)	at pressure of 0.2 MPa	
	Spray angle (°)	Spray capacity (ℓ/min)
Rc3/4	75–95	23–45
Rc1	75–95	23–90
Rc1½	75–95	50–200
Rc2	85–100	100–550
Rc2½	80–100	250–700
Rc3	80–90	600–700

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

FEATURES

With stainless steel socket (Optional).

X-shaped whirler provides large free passage diameter, which minimizes clogging.

Wear-resistant alumina ceramics nozzle tip.

Full cone spray pattern with uniform distribution.

How to order

Please contact our local sales office for details.

BBXP
series

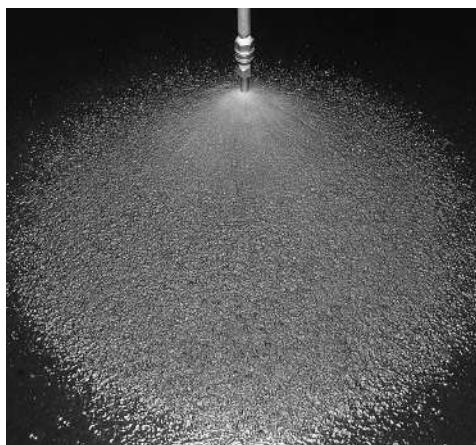

Wide-angle Full Cone Spray Nozzles

Iron making process

- Gas temperature control at the top of furnace

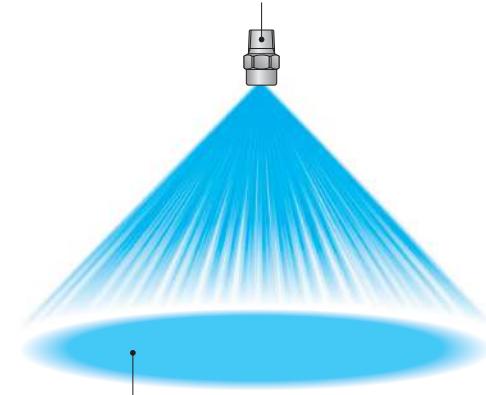

Steel making process

- Cooling steel in CCM

FEATURES

X-shaped whirler provides large free passage diameter, which minimizes clogging.

Full cone spray pattern with wide spray angle 120°.

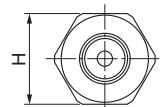

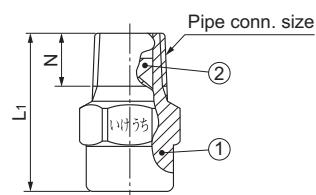

BBXP series

MATERIALS

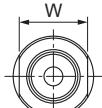

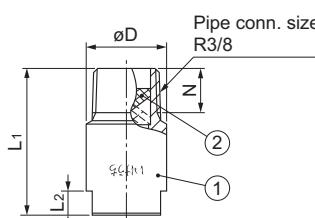

- Sizes R1/8–R3/8 (Rc3/8): S303
- Sizes Rc1/2–Rc1: S303 or B (brass)
- Sizes Rc1*1/2 or larger: S316

OPTIONAL MATERIAL: S316L or others

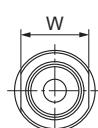

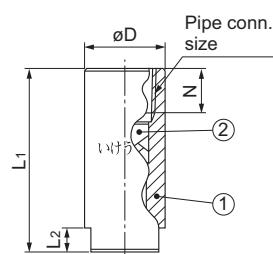

R1/8, R1/4

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
 10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 1/8M BBXP 015 S303

*1) "M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

*2) When spray capacity code is 015–030, pipe connection size for R1/4 is indicated as "1/4x1/8M".

*3) See "MATERIALS" information on page 59 for standard materials by each size.

SSXP
series

Square Full Cone Spray Nozzles

Steel making process

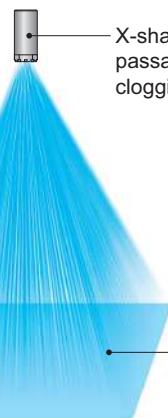

Cooling steel in CCM

Rolling mill process

Cooling plates

FEATURES

X-shaped whirler provides large free passage diameter, which minimizes clogging.

Square full cone spray pattern.

TJJX series nozzle with larger spray flow and larger flange is available upon request.

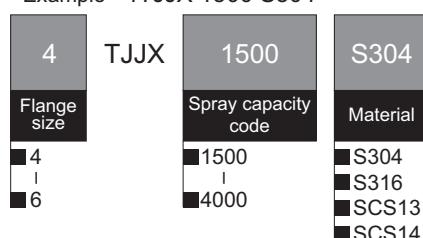

For spraying slurry, TJJX-SiC series nozzles made of highly wear-resistant SiC (silicon nitride bonded silicon carbide) are available.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 l (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 l (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 4TJJX 1500 S304

7JJXP series

7-head Full Cone Spray Nozzles

Iron making process

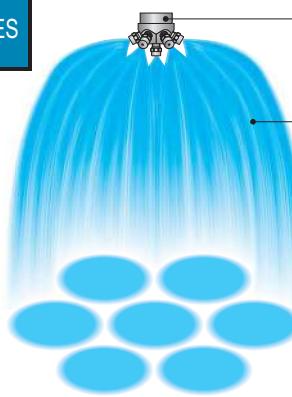

Gas cooling

Rolling mill process

Cleaning inside of tank

FEATURES

7 pcs. of JJXP series full cone spray nozzles are screwed into a header.

Mean spray droplet diameter is about half that of other single-head full cone spray nozzles having the same spray capacity.

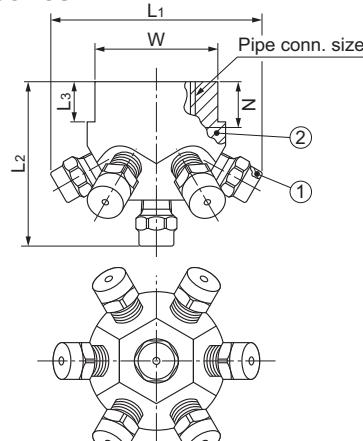

MATERIALS S303 or B (Brass)

OPTIONAL MATERIALS: S316

*2) "M" indicates male thread (R) and "F" indicates female thread (Rc).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

SPB
series

SPILLBACK Nozzle with Variable Flow

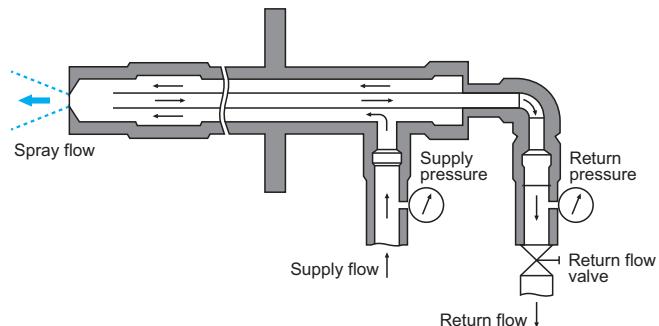

Raw material / pig iron making process

- Gas cooling in flue gas desulfurization
- Gas cooling in blast furnace (dry dust catcher)
- Moisture conditioning of supply air to blast furnace (water spraying to hot blast stove)

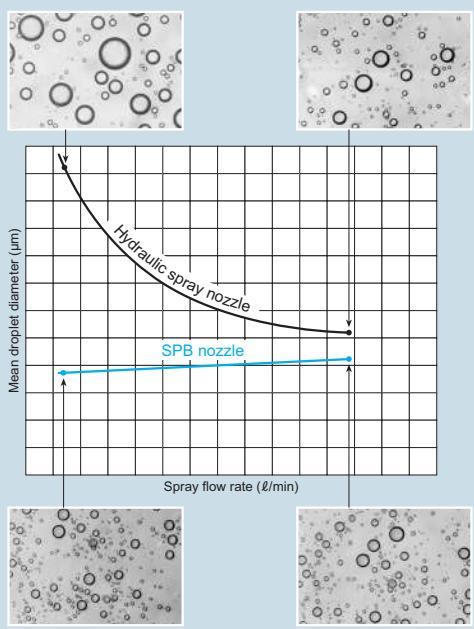

FEATURES

Spray capacity can be controlled by opening/closing the return flow valve while supply pressure is kept constant. Featuring minimal variation in spray droplet size with a large turndown ratio of spray capacity (1:10), SPB series nozzles are ideal for gas cooling where the inlet gas temperature and gas flow rate varies.

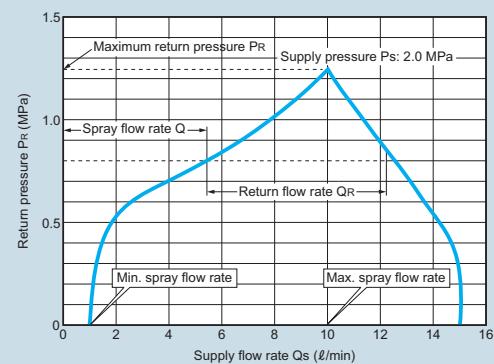

Fine atomization with no large droplets

The variation in spray droplet sizes is minimized despite the modulation of spray flow rate, SPILLBACK nozzle is suitable for evaporative cooling in cooling towers where the inlet gas temperature varies.

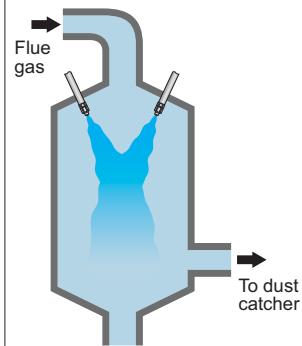

Turndown ratio is 1:10

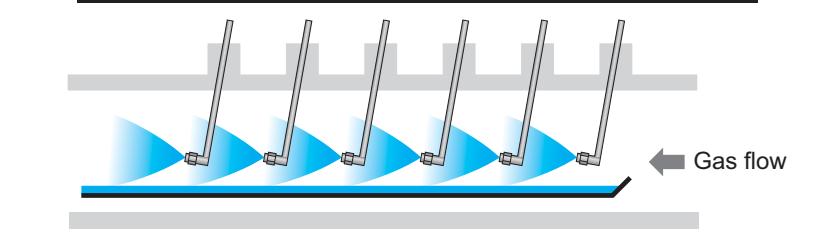

Spray capacity is maximized by fully closing the return valve and minimized by fully opening the return flow valve. The turndown ratio of spray capacity is 1:10.

Use in flue gas cooling tower

SPB nozzles used in air inlets of blast furnace

Affiliated SPILLBACK Nozzles for finer atomization

Sister products

SPB series 4-orifice and multiple-head SPILLBACK Nozzles

Nozzles mounted with multiple single-orifice nozzle tips for excellent atomizing performance at the same spray flow.

4-orifice SPILLBACK Nozzle

The mean droplet diameter is 12% smaller compared to the standard SPB series nozzle.

Please contact our local sales office for details.

KKK
series

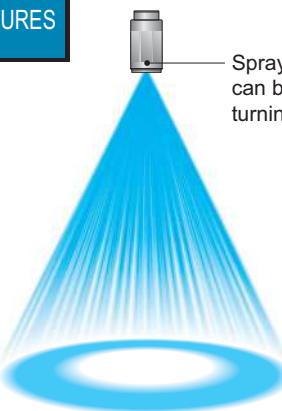

Hollow Cone Spray Nozzles w/ Variable Spray Angle & Spray Capacity

Iron making process

● Cooling slag

FEATURES

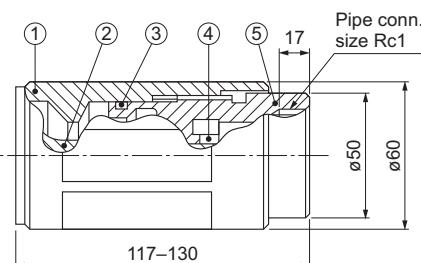

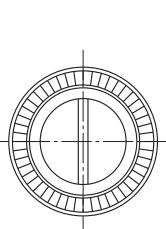

Spray angle and spray capacity can be changed as desired by turning the adjustment cap.

KKK series

1F KKK 2*Ø240-320SCS13

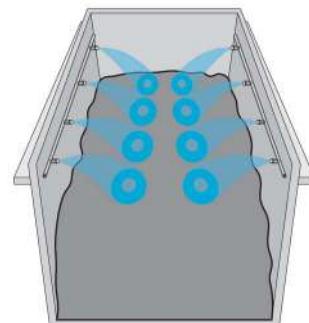

MATERIAL SCS13

①Body ②Cap ③O-ring ④Lock nut ⑤Body

KKK nozzles used in slag cooling

Cooling zone can be changed by altering spray angle and spray capacity, which allows effective slab cooling.

Slag pit

Available KKK series

Series	Pipe connection size	Pressure: 0.2 MPa	
		Spray angle	Spray capacity (l/min)
1FKKK 2*Ø240-320SCS13	Rc1	105°	240–320
1*1/4FKKK 2*Ø300-400SCS13	Rc1*1/4	105°	300–400

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 l (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 l (liter)

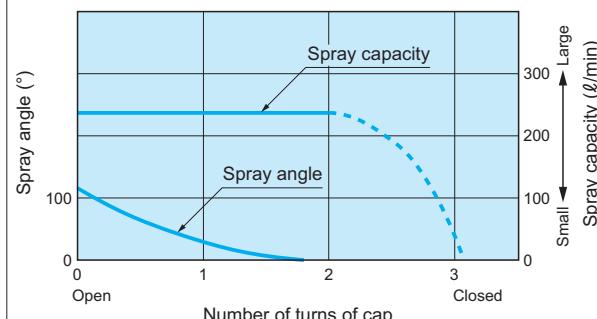

How to order

Please inquire or order using these product codes.

or
1*1/4F KKK 2*Ø300-400 SCS13

Technical data

Change in spray angle and spray capacity by turning cap

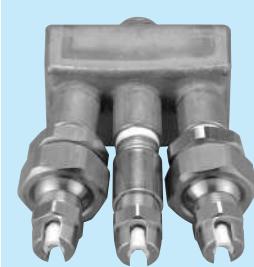

3OV
series

3-Head Off-center Flat Spray Nozzles

Various process

- Water spraying
- Dust suppression
- Cooling

Please contact our local sales office for details.

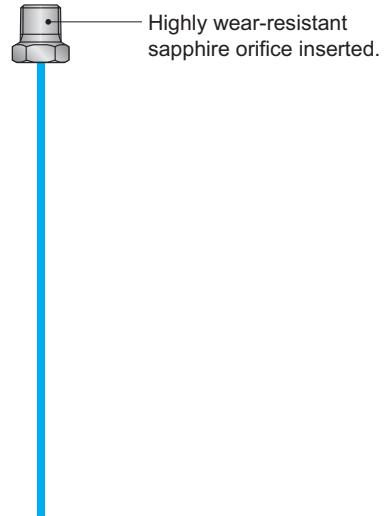

FEATURES

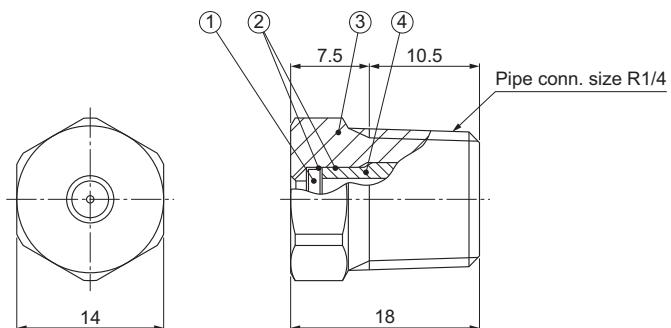

Sprays over a wide area.
Spray area and spray direction are adjustable.

**CMP-Sa
series****Solid Stream Jet with Wear-resistant Sapphire Orifice****Raw material process**

 Cleaning electric furnace covers of coke ovens

**FEATURES****CMP-Sa series**

MATERIAL S303

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

①Sapphire orifice ②Adhesive: Araldite®H ③Body ④Sleeve

Orifice diameter code	Spray capacity (ℓ/min)					
	5.0 MPa	10 MPa	20 MPa	30 MPa	50 MPa	70 MPa
ø0.4	0.52	0.72	1.01	1.22	1.56	1.83
ø0.5	0.76	1.05	1.47	1.78	2.28	2.67
ø0.6	1.10	1.54	2.14	2.60	3.32	3.89
ø0.7	1.49	2.08	2.89	3.51	4.49	5.27
ø0.8	1.94	2.71	3.77	4.58	5.85	6.87

TAIFUJet® series Air Booster Nozzles

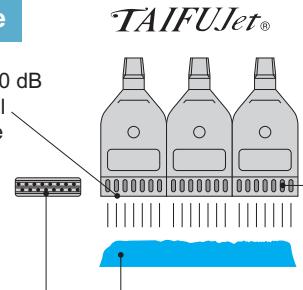

Various process

- Air cooling
- Blowing off drying
- Stripping
- Cleaning
- Blowing off dust
- Air blow transport

FEATURES

Flat type

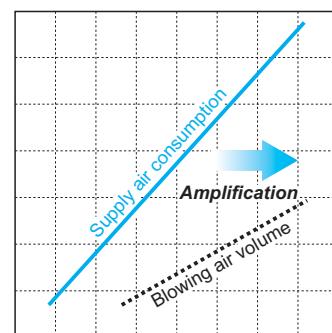

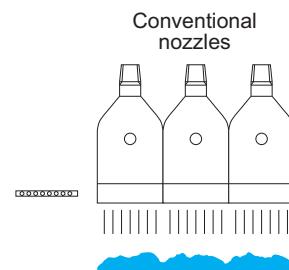

Noise level is reduced by 10 dB compared to a conventional one-hole air nozzle with the same air volume.

Uniform air flow resulting from the unique design.

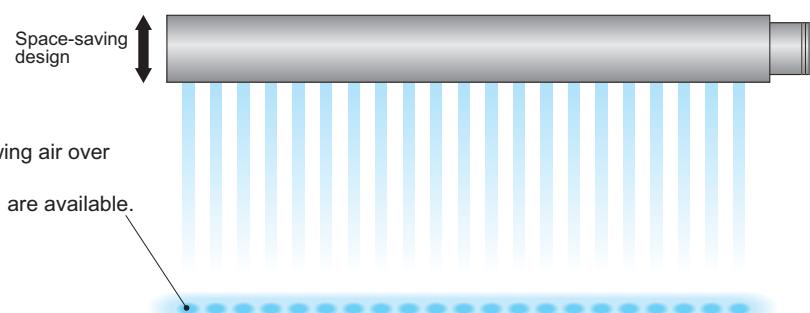

TAIFUJet®

The special configuration takes in surrounding air and boosts powerful air flow.

Long flat type

Space-saving design

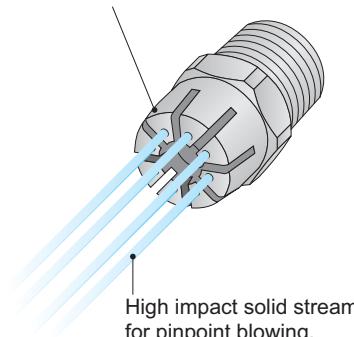

Long flat type designed for blowing air over greater widths.

Width type, 100 mm–1400 mm, are available.

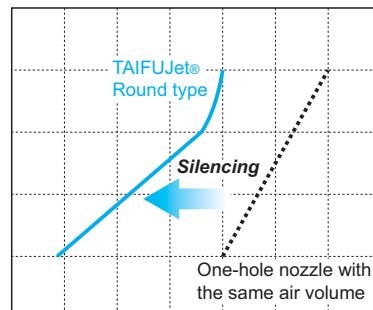

Round type

Noise level reduced by more than 10 dB compared to a conventional one-hole air nozzle with the same air volume.

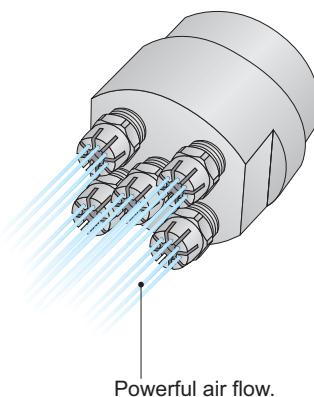

High impact solid stream for pinpoint blowing.

Noise level comparison

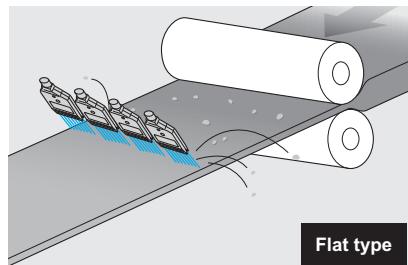

Cluster header round type

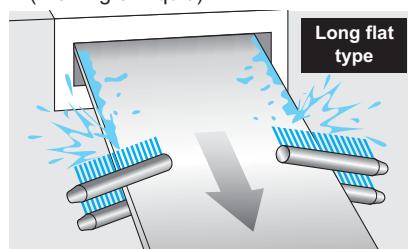

Powerful air flow.

Blowing off dust from steel plates

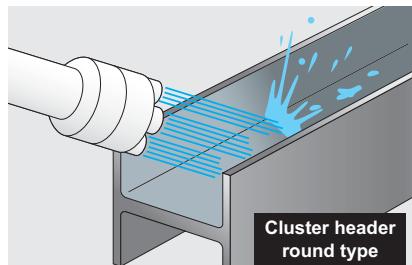

Flat type

TAIFUJet® Usage examples

Edge wiper for steel surface treatment
(Blowing off liquid)

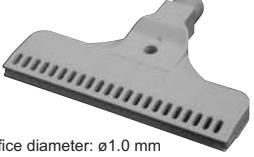

Long flat type

Blowing off water from shaped steel

Cluster header round type

TAIFUJet® Air Nozzles Lineup

		PLASTIC		METAL	
FOR COMPRESSORS	FLAT TYPE	Affordable, 42 mm wide standard flat air nozzle.		121 mm wide broad type air nozzle.	
	ROUND TYPE	Affordable, standard round type air nozzle for high-impact, pinpoint blowing.		42 mm wide, stainless steel air nozzle. Available in three orifice diameters.	
FOR BLOWERS	FLAT TYPE	24 mm wide, 30 mm long, ultra-compact air nozzle.		Compact and wider flat air nozzle.	
	ROUND TYPE	Long flat type space-saving design. Available from 100 mm to 1400 mm in length.		Multiple header type for applications needing stronger surface air flow.	
		PLASTIC		METAL	
FOR BLOWERS	FLAT TYPE	42 mm wide standard flat air nozzle.		42 mm wide flat air nozzle made of aluminum.	
	ROUND TYPE	Plastic, long flat type. Space-saving design.		Aluminum, long flat type. Space-saving design.	
		Blower air nozzle for high-impact, pinpoint blowing.		Aluminum nozzle for high-impact, pinpoint air blowing.	

For details, please refer to our Air Nozzle catalog.

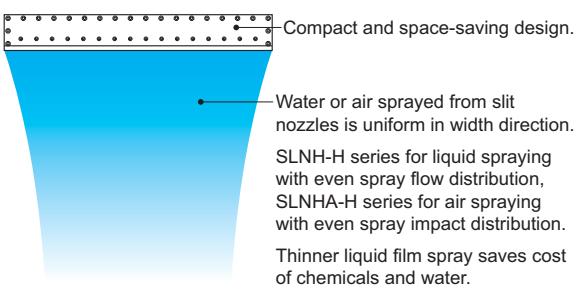

SLNH-H/SLNHA-H series Slit Nozzles (Water/Air Curtain)

Various process

- Water cooling
- Cleaning
- Air blowing

FEATURES

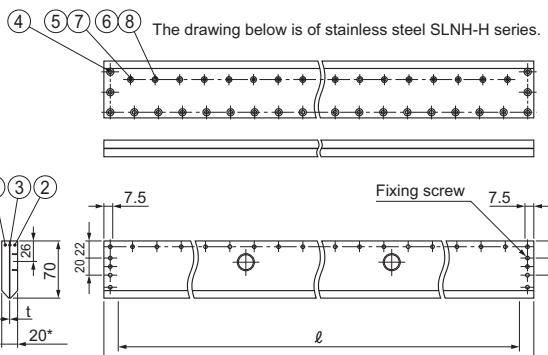

SLNH-H/SLNHA-H series

MATERIAL S304 or PVC

Series	Slit length <i>l</i> (mm)	Slit opening <i>t</i> (mm)	Effective liquid film width (mm) at 10 mm height	Number of inlets	Thread size		Total length (mm) <i>L'</i>	Mass (kg)			
					Fluid inlet	Fixing		S304	PVC

LLYOH
series

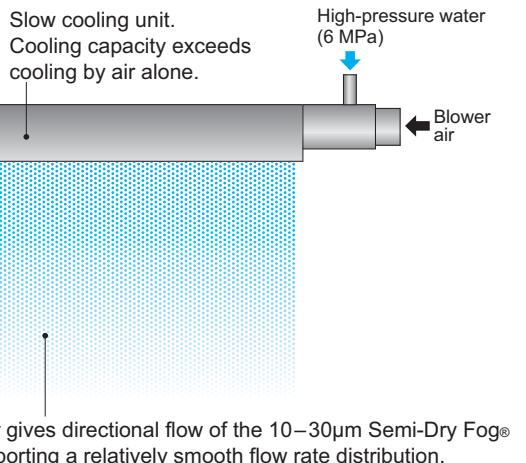

Blower LYOHM Header

Surface finish

- Cooling steel plate in each process of CGL, CAPL, EGL, CCL

Equips LYOHM nozzles producing Semi-Dry Fog® with droplet diameters of 10–30 µm

FEATURES

● Spray capacity and blower air consumption

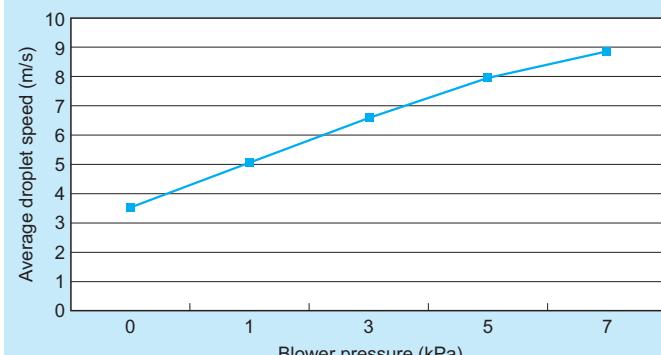

Liquid pressure (MPa)	Spray capacity (ℓ/min)	Blower air pressure (kPa)	Blower air consumption (m³/min)
6	28.3	0	0
		1	2.4
		3	4.46
		5	5.72
		7	6.69

Performance data of Blower LYOHM header with 27 pcs. of LYOHM nozzles, spray length 700 mm.

How to order

Please contact our local sales office for details.

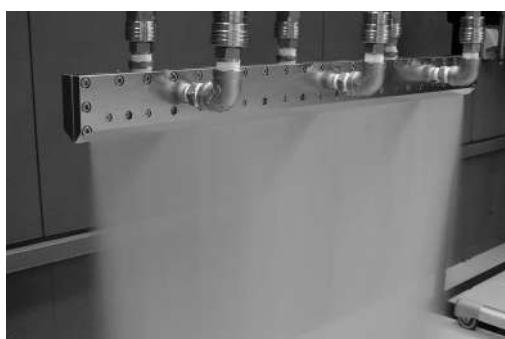

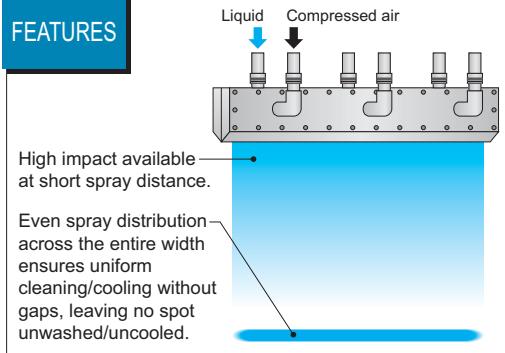

● Relationship between blower pressure and droplet speed

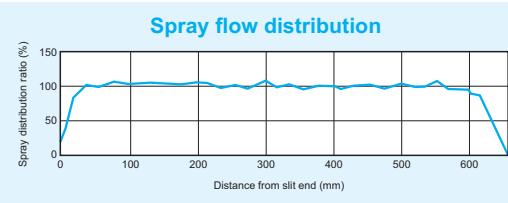

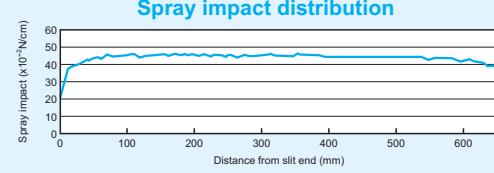

At distances under 150 mm, droplet speed is roughly proportional to blower pressure.

PSN
series

Pneumatic Slit Nozzles

FEATURES

Pneumatic Slit Nozzles PSN series
Spray impact and Spray flow distribution data
Spray conditions

- Product: PSN650x0.15
Spray distance: 10 mm
- Air consumption: 2,340 ℥/min, Normal
 - Spray capacity: 15.6 ℥/min
 - Air-water ratio: 150
 - Compressed air pressure: 0.27 MPa
 - Water pressure: 0.25 MPa

How to order

Please contact our local sales office for details.

UT series Universal Ball Joints

Metal

Photo is UT Ball Joint with a spray nozzle.

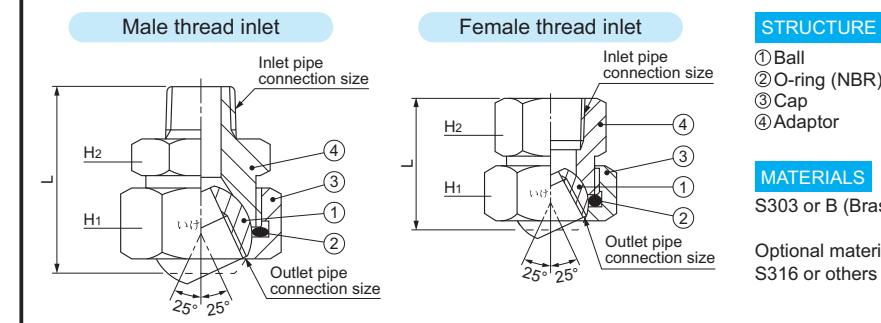

FEATURES

- Accurate nozzle alignment is possible after connected to pipe.
- Adjust spray direction over a range of 50° as desired.

! Cautions for use

Maximum pressure:
15 MPa for UT-S303
4 MPa for UT-B (Brass)

Do not use under conditions where suddenchange of water pressure occurs.

Ball joint code (Inlet x Outlet)	Inlet pipe connection size	Outlet pipe connection size	Dimensions (mm)			Mass (g)	
			L	H1 (WAF) ^{*1}	H2 (WAF) ^{*1}	S303	B
UT R1/8 x Rc1/8	R1/8	Rc1/8	32.5	22	21	56	60

*1) WAF = width across flats

Plastic

Photo is UT Ball Joint with a spray nozzle.

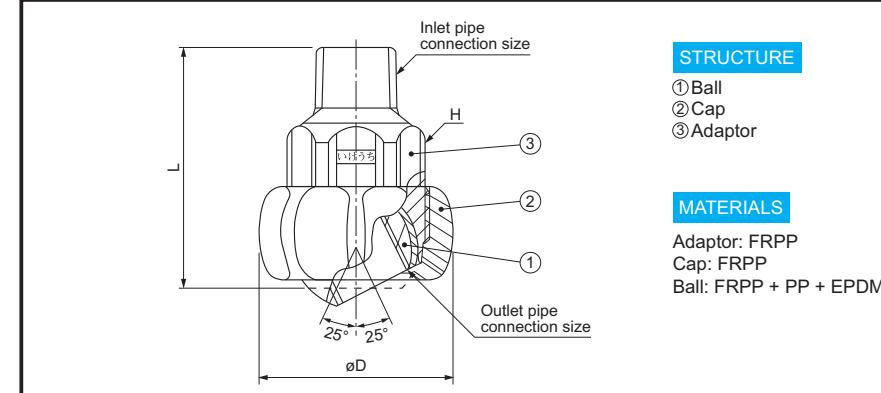

FEATURES

- Adjustable spray direction while spraying up to 0.3 MPa.
- No O-ring. Easy installation by hand without tools.
- Lightweight, only half of metal joint.
- Low price due to injection molding.

! Cautions for use

**Maximum pressure is 1 MPa.
Use at normal temperature.**

Do not use under conditions where suddenchange of water pressure occurs.

Ball joint code (Inlet x Outlet)	Inlet pipe connection size	Outlet pipe connection size	Dimensions (mm)			Mass (g)
			L	H	ØD	
UT R1/8 x Rc1/8	R1/8	Rc1/8	38	21	32	12

	3/8M		3/8F	
	1/2M		1/2F	
	3/4M		3/4F	

Plastic <Example> UT 1/8Mx1/8F FRPP-IN

UT	1/8M	x	1/8F	FRPP-IN
	Inlet pipe conn. size ²		Outlet pipe conn. size ²	
	1/8M		1/8F	
	1/4M		1/4F	

*2) "M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

WUT
series

360° Rotatable Universal Joints

FEATURES

- 360° rotatable to adjust spray direction.
- Includes the rotating lock to keep the nozzle direction fixed.
- Safe design prevents parts from dropping off when the lock is released.

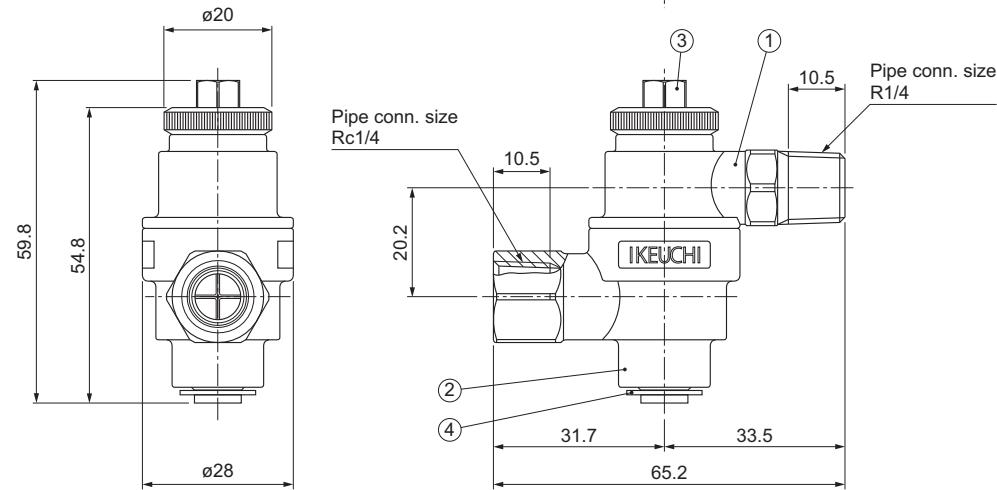

WUT series

MATERIALS

Adaptor: SCS13
Bolt: S303
E-ring: S304
O-ring: NBR

MASS

146 g

①②Adaptor ③Bolt ④E-ring

! Cautions for use

- The bolt may loosen because of vibration if it is screwed in by hand. Tighten with a torque-wrench at 6 N·m.
- Maximum working pressure is 3 MPa.
- When used with a solid stream jet nozzle, slightly turbulent flow occurs.

How to order

Please inquire or order as below.

WUT 1/4M x 1/4F SCS13

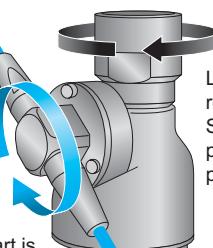

ROTARY JETTER
RJ series

Low-pressure Rotating Cleaning Nozzles

Rolling mill process
● Versatile tank cleaning

Use pressure	0.3–0.8 MPa
Product code	
RJ3-2-ø7	103 ℥/min–169 ℥/min (at 0.3 MPa) (at 0.8 MPa)
RJ3-2-ø8	127 ℥/min–207 ℥/min (at 0.3 MPa) (at 0.8 MPa)
Reach distance	Approx. 10 m in radius
Heat resistance	80°C
Mass	2.7 kg
Material	S304

Buff finishing is possible as an extra-cost option. Please inquire with us.
Four direction spray type is available on request.

FEATURES

Low-pressure type rotating nozzle.
Solid stream jet provides high cleaning performance.

As the nozzle part is movable, it is easy to insert into and eject from the tank or equipment.

Compact design enables the nozzle to install in a tank with small inlet.

JET ATTACKER
JA series

Rotating Nozzles for Tank Cleaning

Rolling mill process
● Versatile tank cleaning

3-Dimensional type

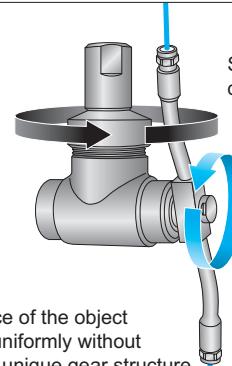

Medium-pressure spec.:
JA3-2S (øXX)

Low-pressure spec.:
JA3-2L (øXX)

Medium-pressure spec.:
JA3-4S (øXX)

Nozzle orifice diameter is specified in place of XX.

FEATURES

Simple structure with rotation driven solely by water pressure.

The whole surface of the object can be cleaned uniformly without gaps because of unique gear structure.

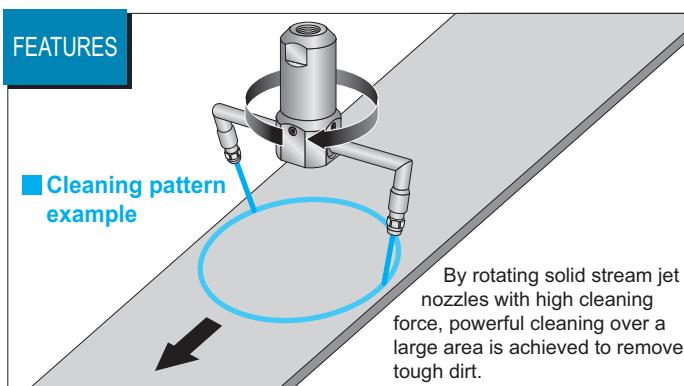

CERJet® spray nozzles include ceramic orifices which provide excellent wear-resistance even at high pressure use.

Product code	Number of nozzles equipped	Pipe connection size	Working pressure (MPa)	Spray capacity (ℓ/min)	Allowable temperature (°C)	Main materials	Mass (kg)
JA3-2L (øXX)	2	Rc1/2	0.3–1.2	24–82	4–60	S304, special PTFE, NBR, FKM	1.70
JA3-2S (øXX)	2		1.0–3.0	12–36			1.60
JA3-4S (øXX)	4			24–70			1.95

Nozzle orifice diameter is specified in place of XX.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℥ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℥ (liter)

2-Dimensional type

FEATURES
■ Cleaning pattern example

By rotating solid stream jet nozzles with high cleaning force, powerful cleaning over a large area is achieved to remove tough dirt.

Product code	Number of nozzles equipped	Pipe connection size	Working pressure (MPa)	Spray capacity (ℓ/min)	Allowable temperature (°C)	Main materials	Mass (kg)
JA2-2 (øXX)	2	Rc1/2	0.3–3.0	14–53	4–60	S304, PTFE, NBR, FKM	1.9
JA2-4 (øXX)	4			28–98			2.0

Nozzle orifice diameter is specified in place of XX.

SR
series

Low-Speed Rotating Cleaning Nozzles

Rolling mill process

Versatile tank cleaning

**FEATURES**

- Spray pattern (360° spray)

**Low-Speed Rotation**Low-speed rotation of 5–10 rpm^{*1} at 0.3 MPa.

Maximized contact time between cleaning object and spray liquid achieves higher cleaning effect.

^{*1) Reference value}**Heat-Resistant**

Made of stainless steel 316L with high heat resistance.

Applications

Cleaning for tanks, containers, filling machines, conveyors and various other tanks.

Spray capacity code	Pipe conn. size	Spray capacity (ℓ/min) ^{*2}					Spray pattern	Rotation speed (rpm) ^{*2} (at 0.3 MPa)	Heat resistance
		0.15 MPa	0.3 MPa	0.5 MPa	0.7 MPa	1.0 MPa			
13	Rc1/8	9.19	13.0	16.8	19.9	23.7	Flat spray 360°	5–10	150°C
20	Rc1/4	14.1	20.0	26.0	30.6	36.5

^{*2) Spray capacity and rotation speed are for reference only.}

Note: 1) Use of strainer is recommended. Recommended strainer mesh size #200.

2) Install the nozzle downward for stable rotation.

3) If upward nozzle installation is needed, please use our ES series nozzles instead.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℥ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℥ (liter)**How to order**

Please inquire or order for a specific nozzle using this coding system.

^{*3) "M" indicates male thread (R) and "F" indicates female thread (Rc).}

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

ES
series

Rotating Cleaning Nozzles for Tanks/Containers

Surface finish

Cleaning for chemical tanks

Stainless steel type

PTFE type

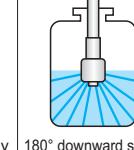

**FEATURES**

Easy maintenance due to low number of parts.

Rotating flat spray or solid stream pattern achieves a complete, uniform cleaning.

[Spray variations]

180° upward spray

180° downward spray

Rotation is driven solely by the flow of the cleaning fluid even at low pressure of 0.05–1.0 MPa.

Compact design, minimum total length 38 mm.

Stainless steel ES series

Spray capacity code	Pipe conn. size	Spray capacity at 0.3 MPa (ℓ/min)	Dimensions (mm)	Mass (g)	Spray pattern
01	Rc1/8	7	ø16x38	20	360° 180° upward 180° downward
02		13	ø20x53	35	
03		20	ø25x65	75	
05		31	ø30x97	155	
1		42	ø31.5x115	185	
2		70	ø41.5x123	260	
3	Rc3/4	150	ø60x139	605	
4	Rc1	210	ø75x163	925	
5	Rc1*1/2	440	ø88x180	1,640	

Max. allowable temperature for ES series, stainless steel type is 60°C (140°F).

PTFE ES/ESV series

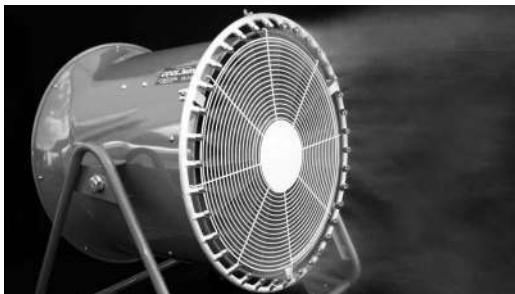

Spray capacity code	Pipe conn. size	Spray capacity at 0.3 MPa (ℓ/min)	Dimensions (mm)	Mass (g)	Spray pattern
30	Rc1/2	30	ø50x65	130	360° 180° upward 180° downward (ESV: Flat spray, 360° only)
40		40			
70		70			
150		150			

Spray capacity code of 110 (110 ℓ/min. at 0.3 MPa) is available in ESV-PTFE series.
Max. allowable temperature for ES/ESV-PTFE series is 93°C (199°F).Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℥ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℥ (liter)

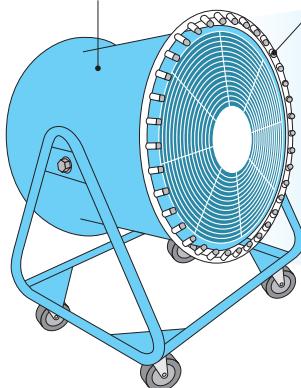

For details of the rotating nozzles for tank/container cleaning, please ask for each product leaflets.

CLJ
series**COOLJetter® Cooling Fan Unit with Semi-Dry Fog® Nozzles****Improve work environment**

- Environment cooling (heat reduction)
- Spot cooling of heated refractories and steel products
- Dust suppression
- Spraying of deodorizer

**FEATURES**

Energy-economizing unit cools outdoor and semi-enclosed spaces at low cost.

Equipped with LYOHM nozzles spraying 10–30 µm Semi-Dry Fog®.

High-capacity fan allows fog cooling over a wide area of 5–50 m.

Product code (CLJ-)	Dimensions		Mass (kg)	Number of nozzles equipped (pcs.)	Spray capacity (ℓ/hr) (at 1.3 MPa)	Fan ventilation (m³/min) (50/60 Hz)	Power supply	Main features, accessories
	Fan diameter (mm)	Width x Depth x Height (mm)						
S-E	ø450	840 x 740 x 1,170–1,280	15 (w/o water)	6	6.4 (at 1.3 MPa)	165/186	100 VAC	<ul style="list-style-type: none"> • No installation work • Low water level sensor • 75-degree oscillation

					85.0 (at 6 MPa)		1,500 W (50 Hz) 1,900 W (60 Hz)	
C590A	ø590	1,250 x 990 x 1,360	200	24	56.6 (at 6 MPa)	320/320	200 VAC (3-phase)	<ul style="list-style-type: none"> • No installation work • w/ Mobile cart • Adjustable elevation angle (max. 90°)
							1,900 W (50 Hz) 2,300 W (60 Hz)	

Note:

*1) Pump unit (sold separately) is required for use.

*2) Shape of the CLJ-590D-K fan base (foot) differs with or without optional features.

*3) Product code for CLJ-590D-K with the optional oscillation function is CLJ-590-KU, IP44 equivalent.

*4) Please inquire with us for detail dimensions.

Note: The pumps in the photos may differ from the actual products.

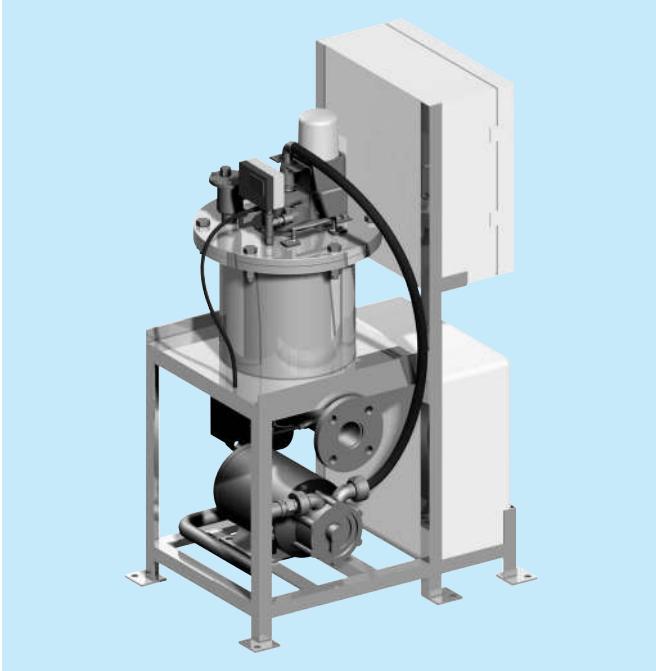

Please inquire with us for details.

ARS
series

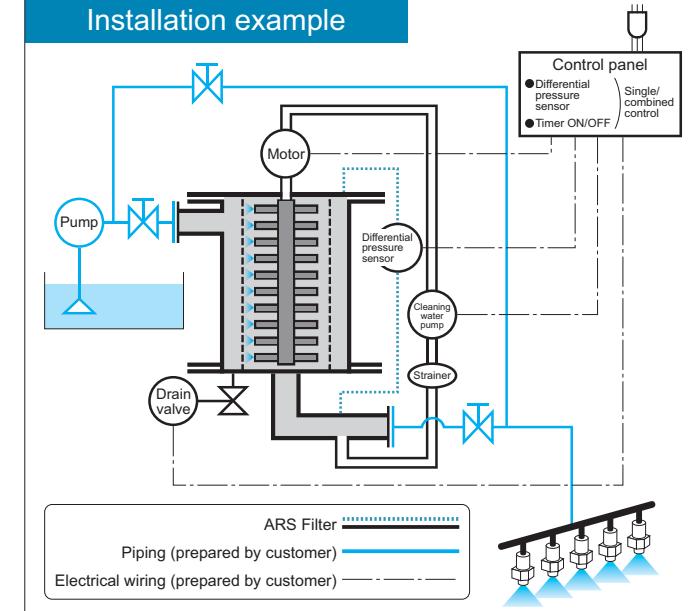

Auto Reverse Self-cleaning Filter

All process

- Recycling of drainage water after cleaning
- Industrial water filtration, cooling water filtration

Installation example

- ARS Filter employs a high-pressure jet spray backwashing method. It ensures stable cleaning, without requiring consumable parts such as cleaning brushes.
- Compact design to install in a small space.
- Detecting the pressure difference caused by an accumulation of foreign particles on the filter, ARS starts jet spray cleaning automatically and discharges foreign particles through the drain.

SPECIFICATIONS

Product code	ARS-150	ARS-500	ARS-1000	ARS-2500
Max. filtration capacity (ℓ/min)	150	500	1,000	2,500
Max. allowable pressure (MPa)	1.0	1.0	1.0	1.0
Power supply, Power consumption	100 VAC, 0.3 kW*	200 VAC (3-phase), 1.7 kW	200 VAC (3-phase), 2.5 kW	200 VAC (3-phase), 3.8 kW
Pipe connection size	Inlet	32 A	50 A	80 A
	Outlet			150 A
	Drain	25 A	25 A	40 A
Filter screen type	Metal wire	#300, #150, #100, #60, #35	#150, #100, #60, #35	#150, #100, #60, #35
	Wedge wire	—	100 μm , 150 μm , 300 μm , 500 μm	100 μm , 150 μm , 300 μm , 500 μm
Dimensions (Width x Depth x Height) [mm]	360 x 510 x 1,300	433 x 666 x 1,053	560 x 1,000 x 1,223	1,000 x 1,800 x 1,882
Mass (without water) [kg]	67*	115	175	850

*Value for ARS-150 with iron pump.

MATERIALS

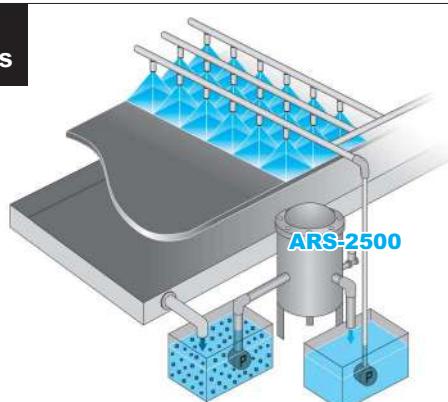

Body: Stainless steel (Note: Not all wetted surfaces of cleaning pump and its hoses are stainless steel)
Packing, O-ring: FKM

ARS Filter used in recycling of industrial water for cooling steel plates

Nozzles became clogged due to foreign particles in the industrial water.

After ARS Filter is installed...

Results: Stable production and stable operation

- Liquid: Industrial water
- Foreign particles: Algae, sand, etc.
- Screen mesh size: 100 μm , 300 μm
- Type of screen: Wedge wire

For details, please refer to our ARS Filter catalog and leaflet.
